SpeedTurf™

TrackTurf™

SpeedTurf™ and TrackTurf™ by SYNLawn are synthetic grass surfaces designed to withstand the rigors of even the most vigorous workout as well as help prevent common athletic injuries. Both products are ideal for agility training and speed drills.

Engineered to increase performance

SpeedTurf™ and TrackTurf™ are specialty non-infill synthetic turfs designed for fitness and agility training exercises. Every piece is engineered to increase performance and speed. They are constructed with a low pile blended polyethylene and nylon with a 5mm foam back. This provides a surface that is less abrasive and results in less friction than competitor's products that only use nylon. The distinctive blended turf allows sleds and other weight-training objects to slide easily across its surface.

Helps prevent common injuries

With innovative shock absorbency designed to reduce impact, SpeedTurf and TrackTurf use a reinforced foam base layer that offers superior protection against jolts and reduces lower back fatigue, muscular exhaustion, shin splints, and other chronic injuries that can be caused by improper shock absorption. Athletes can stretch, bend, and lay on SpeedTurf and TrackTurf with ease and comfort without worrying about hard and unforgiving rubber flooring.

Easy to Clean

SpeedTurf and TrackTurf fibers are easy to clean and disinfect, dramatically reducing the risk of staph infections and mold growth. Composite backing secures the fibers in place providing maximum durability. Plus, because SpeedTurf and TrackTurf do not use infill, training facilities are much easier to keep clean.

Guaranteed to perform

SpeedTurf and TrackTurf allow athletes of every level to hone their skills on the field and off, refining performance and decreasing muscle fatigue. They mimic the feel of real grass while providing additional shock absorbency so that every athlete can train to perform at their best with decreased risk of injury. With the SpeedTurf and TrackTurf warranty you can train hard without worrying about having to replace your flooring every year. SpeedTurf and TrackTurf are built to be as tough as the athletes who train on them so they're backed by a 9-year warranty. Go ahead, surpass your competition by training smart on SpeedTurf and TrackTurf.

Agility Turf Applications

SpeedTurf and TrackTurf are ideal for strength and agility training, sled pulls, indoor shot-put/hammer training, Cross-Training, gym floors, weight lifting areas, indoor and outdoor batting cages, soccer fields, tennis courts, and aerobics. (Pet Friendly)

Custom Colors Available

SpeedTurf™

TrackTurf™

Energy Absorbing Base

Resilient base layer offers superior shock absorption reducing muscular fatigue and risk of common athletic injuries.

Low-resistant surface

Turf fibers are constructed to provide a low-resistant, non-abrasive surface for sled-pulls and push-ups.

Custom Colors Available

Easy to Clean

Turf fibers are low-maintenance and easy to clean reducing risk of staph infection, mold and bacteria growth.

Attribute

Specification

Warranty	9-years
Face Weight	58 ounces
Total Weight	123 ounces
Grass Zone	Polyethelene
Thatch Zone	Texturized Nylon
Primary Backing	Woven
Secondary Backing	5mm Foam
Pile Height	1.0 inches
Roll Width	15.0 feet

Care and Maintenance

SpeedTurf™ and TrackTurf™ are not only built for performance, but easy cleanup as well. While durable and low-maintenance in construction it is important keep your turf clean for your athletes.

Vacuum your turf as needed to remove dirt and debris. For soiled areas use a sponge mop with a low-sudsing household detergent. Care and maintenance procedures are available and we are happy to answer any questions you may have.
