Sustainable Design sets our products apart

DeepStream Designs' mission is to provide alternative products with a timeless design that are engineered and constructed so that they will endure for generations, reducing the impact on the earth's resources, and providing the lowest cost of ownership over time.

Our products' design allows your bins to be as unique as your project, business, or property, and supports the investment you have made in your firm's image. Therefore, if you're looking for a common, cheap, or short-term solution for recyclers, it would be a waste of your time to specify our product for your project.

We are philosophically opposed to building cheap products with a limited lifespan. Products that have parts that can not be easily or cost-effectively replaced mean that the entire unit will be thrown away in a couple of years because it ceases to function or look good. These products end up costing more over time.

Why are DeepStream Designs' Recycling and Trash Bins different from others?

Longevity: Our bins are an investment in the appearance of your property. We partner with our customers by making replacement parts available at our direct cost through our Core Replacement Program -- there is no profit mark-up. Whether they are used indoors or out in the elements, the classic modern design never goes out of style, and our bins are engineered for the **lowest lifecycle cost** over time.

Replaceable panel design: DeepStream's proprietary marine-anodized legs and Anti-Gravity frame system make it easy and cost effective to change the appearance of your bins if the look of your property should change in the future.

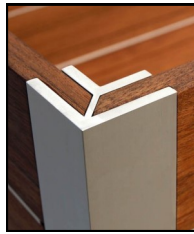

Replaceable panels can turn the face of the bins into easily changeable, cost effective graphics panels for marketing programs or directional information about your property that can be changed by your on-site staff.

If you select the popular wood panels, our frame system contains and directs the incredible differential forces wood creates when it expands and contracts in the rain and sun, delivering **decades** of attractive service. Wood that is bolted or screwed together will tear itself apart in time as each piece expands and contracts at different rates, because they come from different parts of different trees.

Customization: Audubon legs are available in various shapes that allow us to build matching site amenities in any rectilinear configuration. While standard leg heights are 21", 31", and 42", they are available up to 144". We have provided spring-loaded lunch tray carts, towel and jogging amenities carts, umbrella stands, towel return bins, fire towers, and other items to upscale hotel chains, sports venues, resorts, and corporations, malls and food courts.

GREEN:

DeepStream is committed to doing its part to save the planet by using recycled or easily recyclable materials.

Our engineering and materials selections ensure that the products will last as long as possible, breaking the "throw-away" cycle, and protecting the earth's resources. For every bin we build, even if it is from plastic lumber made from recycled milk bottles, we plant 100 trees in our customer's name through Trees for the Future (www.trees.org) which provides for significant employment opportunities at the rural level in countries like Haiti and Brazil, while promoting environmental education and restoration.

We can supply matching garden planters to delineate restaurant or pool areas. Large planters can be supplied on casters to make it easy to set off multi-use areas for meetings or weddings from the general public.

Isolation and Hygiene: Our HDPE non-skid feet prevent contact between the legs and wet ground to prevent corrosion. Our unique aluminum grid that doesn't allow the build up of trash and spoiled food to attract pests like a solid tray can, supports molded recycled plastic liners that will never leak.

Materials: 18-8 Stainless steel fasteners, marine-anodized 6063-T5 aluminum legs, 1/4" thick 5086 marine-grade aluminum push flaps on teflon bushings, 3/4" solid tropical hardwood planking, and high-density plastics and resin will last for decades, and allow for an elegant and modern design.

Construction: **DeepStream** products are manufactured by American craftsmen, using yacht-building techniques and materials. Damaged pieces can be replaced at the manufacturer's direct cost via our unique "Core Replacement Program." Proprietary dielectric paste prevents the stainless steel fasteners from seizing in the aluminum legs for decades of access. Proprietary copper treatment of any closed holes in the wood enhances the tropical hardwood's natural qualities to prevent wood rot for decades.

Value: **DeepStream** sells direct with pricing based on volume, and has very low overhead. This allows us to use the best materials and pay a living wage to American craftsmen, while ensuring that our customer is getting the lowest lifecycle cost for their project and the planet.

For more information about and photos of our products visit www.DeepStreamDesign.com

For details about our planter design and examples of common problems with pots and planters, visit our Planter Blog at www.planterblog.com/blog or www.gardenplantersandliners.blogspot.com

Our modular recyclers can be built with an unlimited range of panel materials to coordinate with your decor. Here are a few examples. Contact us to discuss the material you would like to work with.

Our stock panel material includes 4 types of solid tropical hardwood and 5 colors of 100% recycled plastic lumber (extruded HDPE). We can also use custom resin panels by a variety of manufacturers including 3Form that incorporate grasses, reeds, fabrics, and recycled glass, decorative aluminum panels by Moz Designs and ATI, textured or perforated Stainless Steel panels, slate panels, or changeable graphics. We may be able to incorporate materials from your projects.

The Ultimate Recycling Statement — "Reduce, Reuse, Recycle"
 We are proud to introduce our **Recycled Plastic Lumber Recyclers and Trash Bins** built with HDPE planks made from recycled milk jugs.

Above : Double Recycler in Recycled LDPE with Zephyr aluminum banding, (Color: Light Gray)

- It's Recycled and Recyclable, low maintenance, and colors won't fade
- Plastic lumber is made from 100% recycled post-consumer high-density polyethylene from milk jugs and other polyethylene packaging
- Liners are made from 100% recycled pre-consumer low-density polyethylene
- Marine-anodized Aluminum legs, 16 ga 304 Stainless Steel lids, SS fasteners, HDPE Feet
- Five color options: Tropical Hardwood, Aged Hardwood, Dark Brown, Weathered Teak, and Concrete Gray
- Coordinating planters available
- For every recycler sold, DSD will plant 100 trees through **Trees for the Future** (www.trees.org)

Privacy Screens and Enclosures

Our Privacy Screens and 360° Instant Access Enclosures are a stylish and simple solution for hotels, businesses and residences.

Privacy Screens (shown with 3Form Thicket Raven) are a stylish privacy solution. Easily installed slide-in panels can be changed as needed.

360° Instant Access Enclosures (below) can be set up in as little as 20 minutes to hide eyesores like utility boxes, generators, pool pumps and back flow preventers. Custom-built to any size, removable panels allow access on all sides and even zero setbacks. Shown with 1" spaces between 4" marine-anodized aluminum planks.

For every Enclosure sold, DSD plants 100 trees through **Trees for the Future** (www.trees.org)

Custom Fixtures

Above: Rugged phenolic casters on stainless steel frames ensures moving your custom fixture is a breeze.

Below: We also offer articulated leveling feet with security clips, perfect for sloping or uneven surfaces.

DeepStream creates Custom Fixtures including Valet Stands, Shelving Units, Towel Shelves with Towel Return Bin, and Locker Cabinets.

With DeepStream Designs' proprietary trademark modular frame system, we can create a coordinating collection of custom fixtures to provide continuity throughout your establishment.

Above: This small locking valet stand is 42" high on adjustable stainless steel feet, equipped with 72 key hooks, hidden shelves behind an inner panel with a magnetic latch, and a stainless steel top. Tropical Hardwood-colored recycled plastic lumber is weatherproof and maintenance-free.

The Locker Cabinet at left measures 54" X 22" X 84" H, and holds two sets of keyed lockers for a total of 24 - perfect for the pool, spa, or theme park.

This attractive weatherproof cabinet is crafted with anodized aluminum and weatherproof solid tropical hardwood colored recycled plastic lumber.

The cabinet rests on articulated leveling feet using 12 mm stainless bolts and can be mounted to the deck with aluminum security clips.

The raised floor makes it easy to clean underneath the cabinet.

Solid Wood Options

We stock four species of tropical hardwoods that have been used in outdoor applications for centuries. Because wood is a natural material, there is variation in grains and color within the same species. The samples pictured below give you an idea of the range of color for each type of wood. We will be happy to send samples.
