

FEATURE SHOWCASE

THE LOS ANGELES
PARKS FOUNDATION
Los Angeles, CA

PROJECT GOALS

Create a super durable outdoor gym that doesn't require upkeep and maintenance.

Ensure the site complies with ASTM F3101-21a.

Supply equipment that benefits the entire community, from teens to seniors.

OUTDOOR-FIT x THE LOS ANGELES PARKS FOUNDATION

With a private donation, The Los Angeles Parks Foundation installed outdoor fitness equipment at Robert Burns Park. The outdoor gym complies with ASTM and features three units: the Apollo Multigym and two Everest Cardio Climbers. This project is customized to match the foundation's branding, with the equipment painted in their signature green.

When we initially decided to go with your equipment, it was primarily due to the quality and durability of that your products offered. The robust construction and weather-resistant materials were key factors that convinced us to choose your equipment. We were confident that it could withstand the rigors of outdoor use, ensuring a long lifespan for the fitness equipment. Additionally, the variety of exercise options your equipment provided was a significant selling point. It allowed us to offer a well-rounded fitness experience, catering to users with diverse fitness levels and goals. The clear instructions and user-friendly design made it accessible to a wide range of individuals, from beginners to experienced fitness enthusiasts. Now that the equipment is installed and has been in use for some time, I am pleased to report that the community's response has been overwhelmingly positive. The fitness space has become a hub for people of all ages and fitness levels. Families, seniors, and fitness enthusiasts alike have found the equipment to be not only functional, but also enjoyable to use. We've received numerous compliments on the quality, and it's fostered a sense of community in the park."
