SMART FLOW BACKING

- Smart Flow's wide gauge second layer primary backing creates small opening void of coating.
- These small openings allow liquids to pass through the backing while the coating still manages to encapsulate each backstitch of tufted yarn resulting in high strength tuft bind.
- Smart Flow includes traditional hole punch giving it additional drainage performance.

DRAINAGE RATE: > 900 IN. PER HOUR
ASTM F1551 Water Permeable

NYLON TURF

UV HEAT GUARD®

UV Heat Guard nylon yarn technology is the perfect answer for areas where typical turf made with Polyethylene will burn, melt or rapidly degrade from extreme heat. UV heat guard yarn is made with extreme heat resistant nylon resin integrated with Microban antimicrobial protection.

Advantages of UV Heat Guard Technology:

- Will not melt from low E Window reflection or intense sun exposure.
- Will not melt or rapidly degrade when installed over a pad in areas with intense heat and UV exposure.
- The only nylon turf with built in Microban Antimicrobial technology that inhibits the growth of bacterial, mold and mildew.
- Up to 40% more resilient than polyethylene and polypropylene fiber.
- Excellent for high traffic areas.
- Provides a safe surface for leisure and play.

Luster Guard™

LusterGuard™ is a Smart Turf® technology that reduces artificial shine for a more realistic look.

Luster Guard Fiber - Use of a low luster Polyethylene resins incorporate all the UV inhibitors of other higher gloss fibers currently in the market place. These inhibitors offer uncompromised resistance to UV exposure which result in a natural looking blade that will perform.

CUTTING EDGE BLADE TECHNOLOGY

Wave Blade Technology

S-Blade Technology

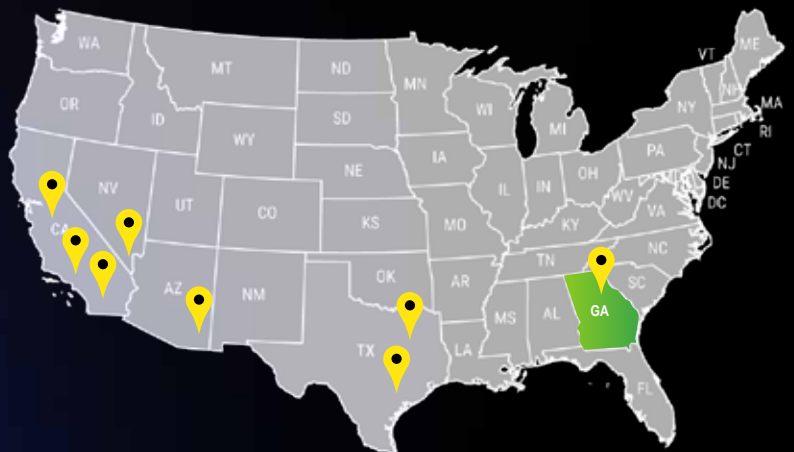

TriColor S-Blade Technology

PROUDLY MADE IN THE U.S.A.

Made in our state-of-the-art factory located in Chatsworth, Georgia with distribution points throughout the U.S.
