

BUILT FOR DURABILITY

KYNAR 500 resin-based metal coatings provide an industry unparalleled high performance finish.

BASTEEL implements a **rigorous and effective process**. Each step ensures a beautifully coated final product that will retain color and withstand the test of time.

1

Our process begins with the **highest quality materials**, galvanized to G90 minimum specifications meeting ASTM A653 standards

Powder coated components will first enter a **six stage pre-treatment process** that was designed specifically for our product

2

3

Pickets, rails, and posts will then undergo a meticulous **application of organic flouropolymer (KYNAR) top coat**

Rigorous testing is completed to ensure the top coat exceeds AAMA 2605 weathering performance specifications

4

5

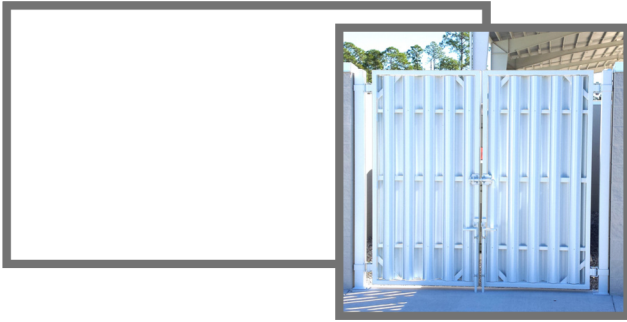

Packaged with **triple layer styrofoam and steel banding** to ensure pristine condition upon delivery to the project site
