

# Moisture Lock 101®

## Moisture Control

**Does your Substrate have elevated moisture levels?  
Use a proven solution...**

### **Moisture Lock 101®**

A **clear, water-based chemical floor hardener** for porous, cementitious substrates.

Moisture Lock 101®, when used as part of an NAC system of NAC TAC primer and ECB® membrane, will provide MVT protection for up to 10#/1000sqft/24 hours.

Use with all NAC sheet membranes on a variety of substrates including mud beds, gypcrete and patching or leveling compounds and more.

# Moisture Lock 101®

## Moisture Control

Moisture Lock 101® is a clear, water based liquid chemical floor hardener which reacts with the free lime and calcium carbonate in concrete to allow it to **fill and seal all pores and capillaries to harden and dust proof your surface**. It is also used in conjunction with our membrane systems to help fight against moisture vapor transmission!

### Features & Benefits

- Maximizes coverage of NAC Primers by minimizing absorption into porous substrates
- Hardens aged, powdering concrete
- 0% V.O.C. content, no odor
- Easy-to-use pre-mixed formula
- Hardens soft surfaces caused by premature freezing or concrete surface
- Covers 100-300 Sq. Ft. per gallon depending on applicator and porosity of substrate
- Up to three coats may be applied (24 HR cure between coats)
