

Strataflex®

Waterproofing Membrane

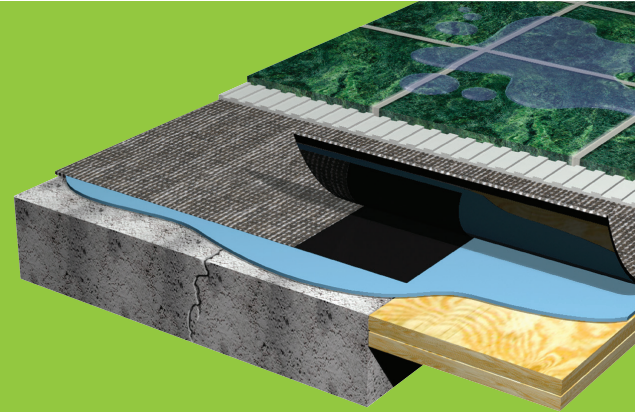

Strataflex® is a premium waterproofing membrane for surfaces that require waterproof protection

Strataflex® is a 40 mil (approx. 1/16") thick, high strength, self-adhering elastomeric sheet membrane designed for use under floor surfaces that require waterproofing protection. Strataflex® features a 2" double stick lap joint that creates a watertight seal providing exceptional waterproof protection. Strataflex® may be installed over concrete, wood, backerboard, mud beds, lightweight concrete and patching compounds and over some existing hard surface flooring. When used under stone, ceramic or porcelain tile, wood and other hard surface flooring, Strataflex® can also provide up to 3/8" of crack isolation protection. Strataflex® may be used with radiant heat and other tile warming systems.

Strataflex®

Waterproofing Membrane

Strataflex® is the ultimate solution for applications that require waterproofing such as **apartments, condominiums, hotels, restaurants, malls, high-rise office buildings, bathrooms, kitchens and any commercial or residential installations requiring waterproof protection.**

Features & Benefits

- 2" double stick lap joint creates a water tight seal
- Protects against reflective cracking and delamination
- Provides up to 3/8" crack isolation protection
- Suitable for interior and exterior use
- Resists MVT up to 10#/1000 SF/24hrs when used with NAC TAC or NS97 primer and 7#/1000 SF/24hrs when used with NAC TAC II
- Safely covers asbestos flooring and provides an effective barrier against radon and mold
- Eliminates need to cut tile to meet control/cold joints
- No need to remove old floors or recess new ones
- Tile can be installed the same day as membrane
- Serves as a waterproof/vapor barrier
- Works with radiant-heated floors and tile warming systems
- Available in 3' x 50' (150 Sq. ft.) and 1' x 50" (50 Sq. ft.)
