

Built for the Field. Backed by Sustainable Innovation.

Cradle-To Cradle Certified® Products

At Shaw Sports Turf, we're committed to delivering products that don't compromise on performance or sustainability.

Cradle to Cradle Certified® — A trusted third-party verification that ensures products are safe for both people and the planet. This certification covers five key areas:

Material Health: Ensuring materials are safe for humans and the environment

Product Circularity: Enabling a circular economy through product and process design

Clean Air & Climate Protection: Generating clean energy and protecting the environment

Water & Soil Stewardship: Safeguarding air, water and soil resources

Social Fairness: Embracing safe, fair and equitable labor practices that advance human rights and strong communities

Shaw Certified Products:

Products become a fully-certified turf system when combined with NXTPlay pad and a natural infill.

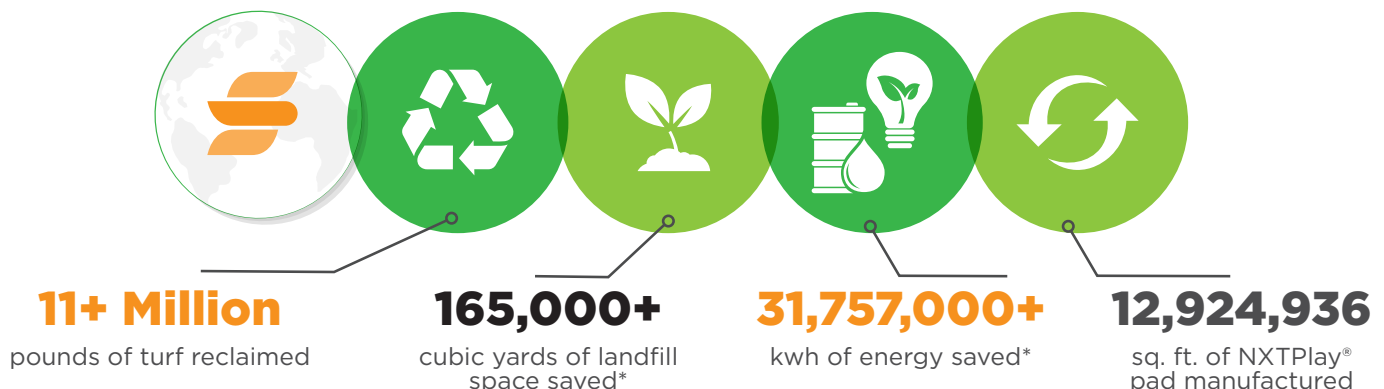

Products that Reduce, Reuse and Recycle.

We provide end-of-life solutions for artificial turf. These fields are reclaimed, recycled, and manufactured in our new, high-performance shock pad, NXTPlay®.

Measurable Environmental Impact from Turf Reclamation Efforts:

Shaw Sports Turf has reclaimed over 5,500 tons (11,000,000 lbs.) of artificial turf that would have otherwise gone to a landfill.

A High-Performance Shock Pad Like No Other.

NXTPLAY

SUSTAINABLE. PLAYABLE. RELIABLE.

The NXTPlay® performance shock pad is a creative solution for an artificial turf field at the end of its useful life. We are recycling these old playing surfaces and transforming them into an innovative, high-quality product with environmental value. NXTPlay is designed with safety in mind, delivers excellent playability and aids in the diversion of used turf from landfills.

Sustainability:

- Made with recycled content
- Completed material health assessment
- Recycled and manufactured in the USA

Playability:

- Firm, natural feel underfoot
- Natural Ball-to-Surface interaction and player-to-surface interaction
- Consistent performance for the athlete
- Superior drainage rate, greater than 170 in/hr
- Freeze-thaw resistant

Installation:

- Fast and easy to install - larger rolls, fewer pad seams and less edge detail

GAME ON:

Tufted in Technology for Increased Sustainability and Performance

Our revolutionary GAME ON® innovation allows for enhanced design capabilities and increased performance. GAME ON's proprietary technology offers a new approach where logos, lines, and numbers are tufted together in one run, limiting the number of seams in your field.

Material Reduction: Traditional vs GAME ON

MATERIAL	REDUCTION
TOTAL TURF INLAYED (LINEAR FT.)	-97%
SEAM TAPE	-59%
ADHESIVE	-56%
TOTAL TURF REQUIRED	-9%

* CALCULATIONS BASED ON AVERAGE 80,000 SQFT FIELD: FOOTBALL WITH MEDIA LINE, SOCCER LINES 30'x30' 2-COLOR LOGO (16), 15' 2 - COLOR LETTERS
