Cape Hatteras CUSTOM SERIES

The Cape Hatteras Custom models combine superior insulation with finely crafted carriage door styles. The result is a unique blend of interesting designs that keep the garage warm. Cape Hatteras doors are faced with 1" thick bright white Versatex PVC on 2" thick white steel base sections filled with polystyrene. The flush, white steel base sections can be upgraded to polyurethane. The steel sections are overlayed with 1/4" thick Versatex PVC panels and 1/2" stile/rail overlays. All Cape Hatteras models have a flush, wood grained white interior side. Cape Hatteras models are 2-3/4" thick, insulated to R-12 using polystyrene, with optional R-18 polyurethane, and are available up to 20' wide.

Cape May CUSTOM SERIES

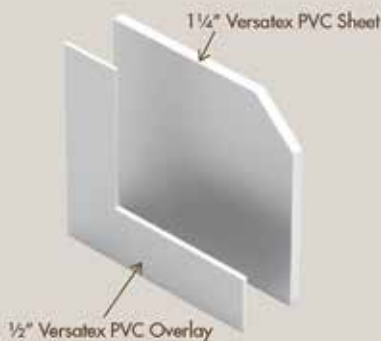

The Cape May Custom models offer the finest traditional carriage door styles. Cape May models are made using only Versatex PVC (with polystyrene insulation); so there is no wood to rot or steel to rust. Its unique construction combines the advantages of weather proof, bright white Versatex PVC with traditional wood construction. Cape May custom doors are built on a 1" Versatex PVC frame whose cavities are filled with 1" of advanced polystyrene insulation and backed with 1/4" thick flat sheet; all models have a flat Versatex PVC interior side. The framing is overlayed with 1/4" thick Versatex panels that can be flat or v-grooved or optional raised panels can be applied over the top. Craftsmen then apply 1/2" Versatex PVC stiles and rails. Cape May custom models are 2-1/4" thick, insulated to R-8 using polystyrene, and are available up to 10' wide.

Decorative Hardware

Cape Cod CUSTOM/TRADITIONAL SERIES

The Cape Cod Custom models offer an attractive price for a true carriage door look, with the edge detail customers love about traditional wood doors without the maintenance. Cape Cod doors are 100% bright white Versatex PVC. They are built on a 1-1/4" Versatex PVC sheet that can be flat or v-grooved. Optional raised panels can be applied over the sheet. Craftsmen apply 1/2" thick overlays over the top of the sheet. All models have a flat Versatex PVC interior side. Cape Cod models are 1-3/4" thick, insulated to R-4 (solid Versatex PVC), and are available up to 10' wide.

Stain colors cannot be customized. Any solid color is available. Speak with your factory representative.

Finish Details

Everite's best in class factory finish capabilities allow you to customize your new Cape Series door. Everite uses advanced finishes by Aquasurtech, a leading supplier of finishes for the vinyl window industry for over 25 years. Aquasurech coatings use advanced low IR ("iridescent radiation") pigments that reflect the sun's rays to create color and prevent internal heat build. Everite can apply a factory stain, or any solid color paint, including black, to make your new door look like stained or painted wood. Best of all, the door will not rot, or fade, and may never need to be refinished. Finally, maintenance free wood has arrived.

Color Details

Cape Series stain colors and popular solid colors shown here. Everite craftsmen designed the stain colors to mimic our most popular woods. Stain colors cannot be customized. Solid colors can be customized to any color using standard color palates from leading manufacturers. Prior to fabrication, Everite will send the color applied to a Versatex PVC sample for your approval.

Warranty Details

Cape Series models do not need to be painted and can be left white. Unfinished Cape Series models carry a 3 year factory limited warranty. Factory finished models carry a 5 year limited warranty. If doors are painted in the field, paint color with LRV ("Light Reflective Value") greater than 45 MUST be used to maintain the factory warranty. This product can be stained in the factory only.

Superior Detail

Every Everite door is handmade to order. We use the same wood production equipment to produce the same edge detail and profiles as our traditional wood doors.

Fine Materials

Everite Cape Series models are made from Versatex, a bright white cellular PVC that features the look and feel of wood without the moisture problems. It does not require painting or sealing and does not swell with moisture or rot. Its dense cell structure produces smoother profiles, improved paint acceptance, less yellowing under sunlight, and fewer dents and scuffs than competing PVC brands.

True Divided Lites Standard

Simulated divided lites have become the industry norm. At Everite, true divided lites remain the standard, even when glass is insulated.

Tried and True Manufacturing Techniques

Everite uses the same joining and edging techniques used in traditional wood door construction. As a result, Everite doors are stick built with square corners. Edge profiles around glass and panels are standard quarter round, or optional bead, ogee, beveled, square and double bead.
