Product Features

KEY PROPERTIES & BENEFITS

- **Durable**

SafeCourt is engineered to withstand intense sporting activities and heavy usage, ensuring it remains in peak condition even after years of play.

- **Longevity**

The combination of professionally installed EPDM rubber and a superior binder extends the lifespan of SafeCourt, providing long-term value for your sports facility. Designed to thrive anywhere from Cancun heat to Canadian cold, SafeCourt resists cracking and flexes with freeze-thaw cycles.

- **Innovative Solution**

An economical and efficient option for your next sports court project. Applied directly over existing damaged concrete and asphalt areas, saving time and money during the renovation process.

- **Creativity**

EPDM rubber is a versatile material that can be used to create various designs, patterns, and colour combinations for a wide range of applications.

- **Porous and Cool**

Space between the granules allows water to percolate through, avoiding puddling on the court surface and reducing fall risks. Those same gaps allow for air to flow between, keeping the surface cooler than typical paving applications.

SafeCourt

APPLICATION AREAS

- **Tennis Courts**
- **Basketball Courts**
- **Pickleball Courts**
- **Batting Cages**
- **Street Soccer Fields**

INSTALLATION

SafeCourt's blend of EPDM rubber is combined with binder on-site by certified installers. The attention to detail, precision in application, and proper curing process all contribute to creating a high-quality surface that exceeds your expectations and requirements.

Safety in every step.
