Welcome to Safescapes.

Our founding brothers, boasting over 15 years of industry expertise, established Safescapes as a family-owned enterprise. Formerly known as Ontario Rubber Installations (ORI), Safescapes represents our ambitious pursuit of growth while continuing to deliver top-tier safety surfaces to our valued clients. Our seasoned team have meticulously installed tailored results for thousands of satisfied customers.

At Safescapes, we hold transparency, knowledge, and safety in high regard. We believe that trust is the foundation of any successful partnership, so we are committed to excellent service based on honest communication throughout every project. Our dedication to knowledge and innovation also drives us to continuously explore global products and techniques, ensuring that we deliver the best and safest solutions to our clients. Choose Safescapes for a partnership rooted in trust, experience, and an unwavering pursuit of excellence.

Join us in creating outdoor spaces for playgrounds, daycares, Montessori schools, horse barns, trails, aquatic facilities, and fitness areas, that are not only functional but also reflect a commitment to quality and safety.

Contact us to learn how we can help you with your next surfacing project.

Offering just the right surfacing product for your landscape is important to us.

Pick a Surface

Product Options

**Which product is best for my landscape?
Choosing the right safety surfacing product
is crucial.**

It's all about ensuring safety, durability, and accessibility. For playgrounds, selecting the correct pour-in-place rubber surfacing option is vital to protect kids from common fall-related injuries. In areas with heavy foot traffic or exposure to the elements, the right surfacing product is key for longevity. When it comes to water parks and aquatic environments, good water resistance ensures longevity.

Safescapes offers you many versatile options. All of our playground surfacing is certified ASTM/CSA for head impact protection and accessibility. Get informed and make the right choice to achieve safety, accessibility and longevity.

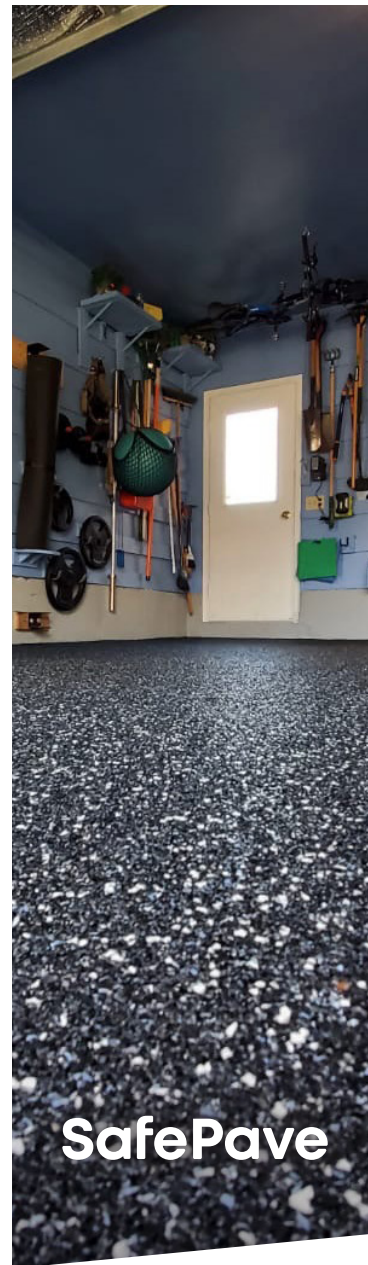

We believe in safety in every step!

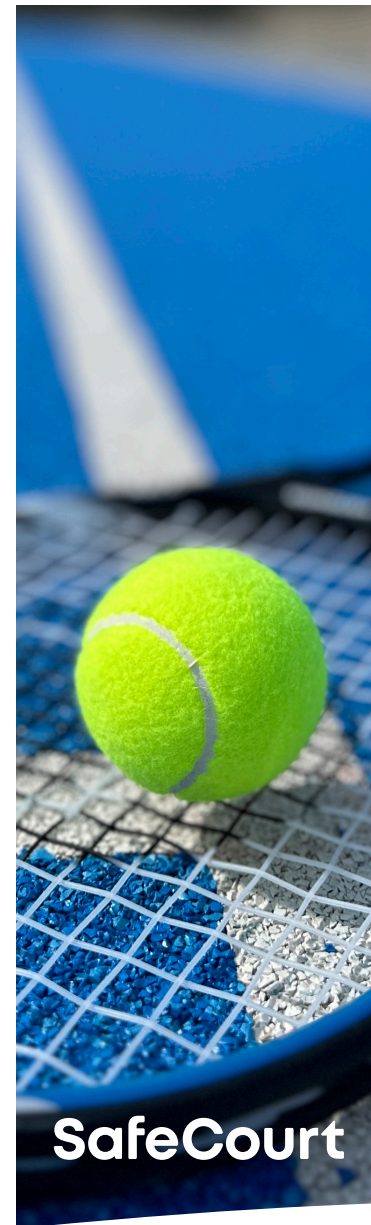

SafeTop

Protect against playground injuries with SafeTop's advanced impact absorption technology.

SafeTop is an innovative, versatile, pour-in-place rubber surfacing system that consists of multiple flexible layers. It includes a customizable base layer, that enables you to meet any fall height requirement. SafeTop is also low maintenance, porous, hygienic, slip resistant and designed to enhance accessibility.

Product Features

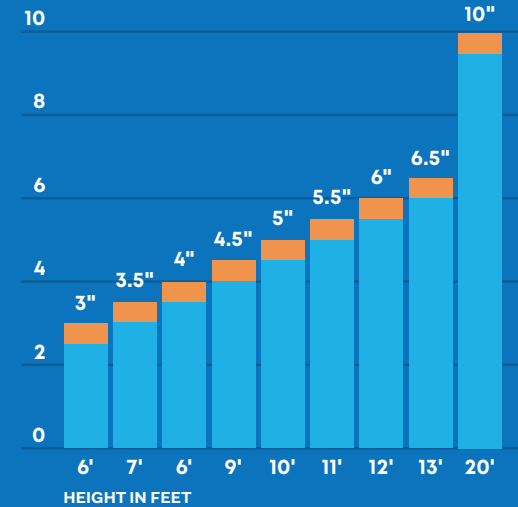

KEY PROPERTIES & BENEFITS

- Durable
- Customizable
- Fast Drying
- Slip Resistant
- Fire Resistant
- Environmentally Friendly
- Porous
- Low Maintenance
- Consistent Fall Height Reading
- Easy to Repair
- Vandal Resistant
- Flexible
- Increase Play Value Designs
- Fully Accessible/ Accessibility Compliant
- Full-Colour Spectrum Options

CRITICAL FALL HEIGHT & SYSTEM THICKNESS

Passing ASTM 1292 Head Impact Criteria $G_{max} < 200$, $HIC < 1000$ (Surfacing system depth is key for determining stone base clearance)

SafeTop

APPLICATION AREAS

- Community Playgrounds
- Residential Playgrounds
- Montessori School
- Daycares

SafeFlex

**Revive and customize
a cracked or uneven
concrete pool deck
without the hassle of a
complete overhaul.**

SafeFlex is designed to be a long-term solution to unsafe concrete surfaces. Ideal for residential and commercial applications, SafeFlex offers a perfect blend of durability, aesthetics, and safety for spaces requiring a robust and attractive finish.

Product Features

KEY PROPERTIES & BENEFITS

- Flexible
- Not self-leveling
- Customizable Colour and Design
- Lower Thermal Conductivity than Concrete
- Slip Resistant
- Chlorine Resistant Available
- Anti-Microbial Available
- Comfortable underfoot
- Non-Leaching
- Easy to Patch
- Low Maintenance
- UV Resistant
- Porous/Non Porous available
- Durable

SafeFlex

APPLICATION AREAS

- Pool Decks
- Patios
- Walkways
- Entrances Ways
- Long-term care facilities
- Locker rooms/ Changeroom areas

The background of the advertisement is a photograph of a workshop or garage. The floor is covered in a dark, textured material made of small black granules with white specks, which is the SafePave product. The walls are light blue and have various tools and equipment hanging on them, including several black wheel covers, a green helmet, and various hand tools. A white door is visible in the background. The top left corner of the image has a dark blue patterned overlay.

SafePave

**Robust, porous, and durable
SafePave offers long-lasting
performance for driveways,
walking trails and more.**

SafePave's strength lies in its blend of pure black granules of recycled SBR rubber mixed with a specially formulated, paving-hard polyurethane binder. This winning combination can withstand heavy foot traffic and vehicle use.

Product Features

KEY PROPERTIES & BENEFITS

- Extra Durable
- Ice Resistant
- Weed Resistant
- Crack Resistant
- Low Maintenance
- Easy to Patch
- Porous
- Slip Resistant
- Anti-microbial Available
- Non-Porous Sealer Available
- Versatile Applications

SafePave

APPLICATION AREAS

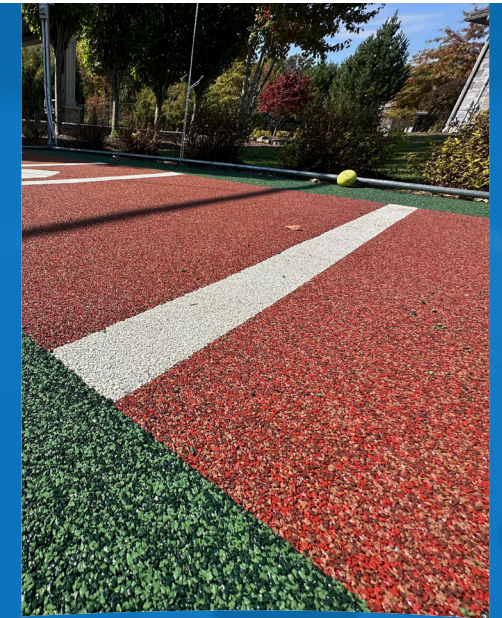

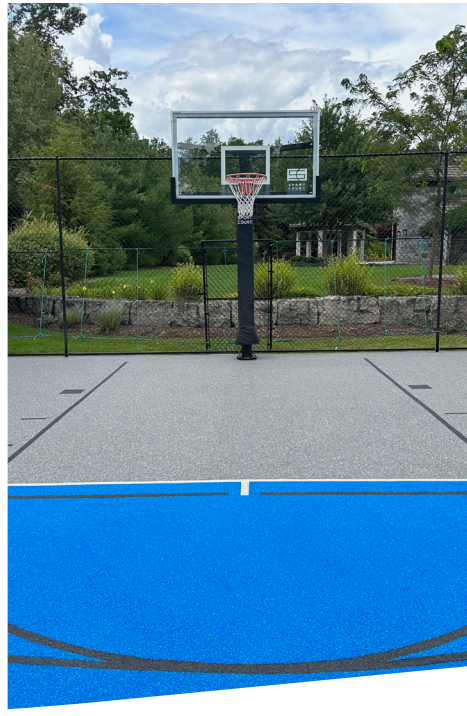

- Driveways and Garages
- Recreational Trails and Paths
- Horse Barns
- Skating Rink Walking Areas
- Golf Course Paths

SafeCourt

Elevate your game and your family time on the ultimate sport court.

Experience sports like never before with SafeCourt, your premier rubber surfacing solution for court surfaces. Whether you're a tennis enthusiast, basketball pro, or pickleball fanatic, SafeCourt will take your game to the next level.

Product Features

KEY PROPERTIES & BENEFITS

- Customizable colours and mixtures
- Non-slip
- Easy to patch
- Easy maintenance
- Durable
- Shock absorbing
- UV resistant
- Weed and crack-resistant
- Porous
- Quick drying

SafeCourt

APPLICATION AREAS

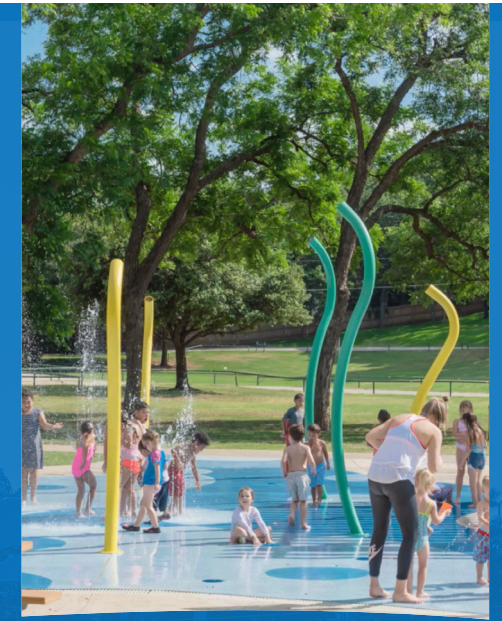

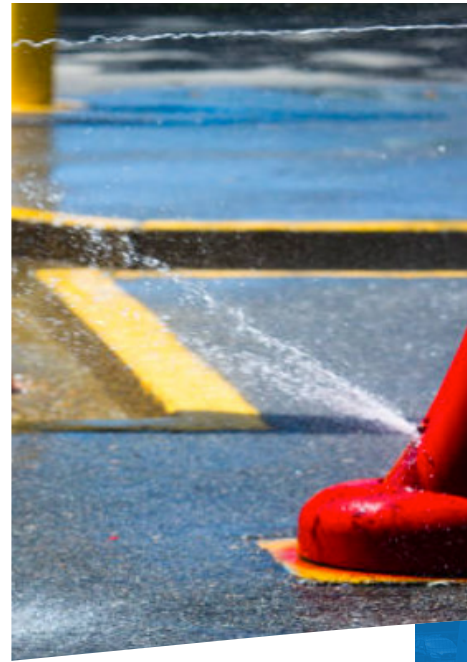

- Tennis Courts
- Basketball Courts
- Pickleball Courts
- Batting Cages
- Street Soccer Fields

SafeSplash

On a hot summer day, cool off with neighbours and friends worry free.

Keep the outdoor summer fun going with SafeSplash's unbroken flexible, non-abrasive surface. Designed to withstand continuous exposure to water and sun, this colourful and durable surface enhances any park setting.

Product Features

KEY PROPERTIES & BENEFITS

- Flexible
- Non-Slip
- Porous/Non Porous available
- Anti-Microbial Available
- UV Resistant
- Chlorine Resistant
- Full-Colour Spectrum
- Custom Designs
- Durable
- Safe
- Comfortable Underfoot

SafeSplash

APPLICATION AREAS

- Splash Pads
- Waterpark Walking Areas
- Wading areas
- Swim Facilities

Glossary

Some key terms to assist in understanding how our rubber surfacing works.

ALIPHATIC UV STABLE BINDER: Cured clear and add UV protection to the UV stable granules. It is best suited for lighter coloured EPDM and TPV rubber but can be used on all colours.

ANTI-MICROBIAL ADDITIVE: Is a component that can be added to any Safescapes product to make it anti-microbial and fungal (recommended for change rooms, splash pads and horse barn stalls or wash bays).

AROMATIC BINDER: Polyurethane Binder that is used to bond EPDM and TPV rubber together. This binder goes through a yellowing phase when exposed to UV rays and over several months will burn away to original colour. This will be at a decreased rate in shaded areas. Best suited for earth-tone and darker colours of rubber.

ASTM: American Standard Testing Methods

CRITICAL FALL HEIGHT: The critical fall height is the minimum height at which a person who has fallen or tripped will be able to break their fall with their hands alone, or as the height at which a serious injury can happen. This height changes from person to person depending on the person's general size and gender. It is the height in which the SafeTop pour-in-place rubber safety surface has to pass impact attenuation standards of $G_{max} < 200$ and $HIC < 1000$ (Passing ASTM F1292).

CURING TIME: Typical curing time for all products ranges from 1-3 days. Ambient temperature and humidity during installation and immediately after affect curing times.

EPDM: Ethylene propylene diene monomer rubber is a type of synthetic rubber used in many applications.

GMAX: A unit of measurement that quantifies the hardness of a surface.

HIC: Head Injury Criterion

PIP: Pour-in-Place Rubber Surfacing

SBR: Styrene-Butadiene-Rubber or black recycled car and truck tires used in the bases of SafeTop and for SafePave products.

TPV: Thermoplastic vulcanizates are dynamically vulcanized alloys consisting mostly of fully cured EPDM rubber particles encapsulated in a polypropylene (PP) matrix.
