

SafeTop

An Accessible and Safe Play Environment

SafeTop is a professionally designed pour-in-place rubber playground surfacing solution that combines safety, durability, and vibrant designs to create an exciting environment for children's play. Our innovative approach ensures children have the freedom to play while providing parents with peace of mind. SafeTop meets and exceeds safety standards, including fall height specifications, to protect children in case of accidents.

Product Features

KEY PROPERTIES & BENEFITS

- **Outstanding Impact Absorption**

SafeTop's composition ensures optimal protection. Our in house testing allows us to make surfaces that can pass almost any fall height requirements (Gmax and HIC). All tests are third party certified.

- **Quick Drying & Water Drainage**

The porous nature of SafeTop allows water to drain through, reducing waiting times for dry playgrounds and eliminating water pooling, making it safe for play even after rain.

- **Low Maintenance**

Unlike loose playground surfaces like engineered wood fibre and other loose fill materials, SafeTop does not require frequent top-ups, saving costs in materials and labour for maintenance.

- **Durability**

SafeTop is engineered to withstand the rigors of playground use. It resists wear and tear, including foot traffic and exposure to the elements, providing a long-lasting, low-maintenance surface.

- **Customizable Design**

Available in a wide range of colours and customizable design patterns, SafeTop adds aesthetic appeal to your playground while incorporating play elements that engage and entertain children.

- **Non-Slip & Wheelchair Accessible**

Designed to be non-slip, SafeTop ensures children's safety while being fully wheelchair accessible, making it inclusive for kids with disabilities.

SafeTop

APPLICATION AREAS

- **Community Playgrounds**
- **Recreational Spaces**
- **School Playgrounds**
- **Daycares**

SAFETY CERTIFICATION

SafeTop complies with ASTM and CSA regulations for critical fall heights ensuring the highest safety standards for children.

INSTALLATION

Professional installation is recommended to ensure optimal performance and safety.

MAINTENANCE

SafeTop requires minimal maintenance. Regular cleaning with mild soap and water keeps the surface looking vibrant and clean. It eliminates the need for constant repairs and upkeep, saving you time and money.
