

Get to know Durable GreenBed™

Explore the Unmatched Quality of the Durable GreenBed™ Garden Kit

Aluminum Corner and Joiner Brackets

Our finished brackets allow each Durable GreenBed™ panel to seamlessly fit together. There are many advantages to using aluminum: corrosion resistance, recycled content, and high strength to weight ratio.

Side Panels

At the core of our design are the remarkably, environmentally friendly side walls made from our Faswall® woodchip-cement composite. The woodchip-cement composite has proven to be ideal for raised beds as it has at least a 20-25 year service life.

It is breathable, delivering oxygen to the root zone and providing excellent drainage. Breathable and drainable side walls add incredible horticultural benefits.

Stabilization Straps

Our aluminum straps are installed on the inside of the beds to keep the walls parallel and straight under the soil pressure. They plug into the joiner brackets every 4' providing excellent structural integrity as well as being a timesaver on the installation of our longer beds.

Trim Pieces

These aesthetic trim pieces add an elegant finish to Durable GreenBed™ Garden Beds. Our trim pieces are available in either cedar wood or Timbertech™ PVC.

Cedar wood is rot-resistant and comes in garnet red or weathered gray colors.

Timbertech™ trim adds even more durability than cedar with the same visual appeal of a wood texture finish that comes in 6 lovely earth-tone colors.

Trim Caps

Our cast aluminum trim caps plug into the top of the brackets creating a pleasant finishing touch on the raised beds. The trim pieces tuck under the trim caps thereby eliminating any wood joints that can separate and move in the weather. The trim cap design also greatly speeds up the installation.
