

COASTAL CANVAS
PRODUCTS

About Us

Our story began in 1975 and we are proud to say that we are made in Savannah. Today, over 40 years later we have grown to 30 dedicated people designing, sewing, welding, painting, and installing our products out of a 45,000 square foot production facility. Every job is custom and every customer is unique and special to us. We are inspired about the endless possibilities that our products create; whether it's about sun, storm, or insect protection, energy saving, or adding personality or branding to a restaurant or local storefront. We have received numerous awards but we don't want to brag, it's not our style. We think that our reputation and the company that we keep says it all.

COASTAL CANVAS
PRODUCTS

The Team

Although we're proud of our products, services, and technology, nothing matches the pride we have in our team. We learned long ago that we're really in the business of building relationships. For that reason, we put a premium on hiring the most qualified people to serve on our team. Everyone on our staff is committed to providing excellent customer service and producing high-quality products. As you work with us we're confident that you'll find this to be true.

Graphics

We know how important your brand is, and how much work you've put into building it, our extensively trained design and sales team can help you find the best way to express your brand through awnings and graphic signage. Utilizing sign industry software, Sunbrella Graphic System™ and state of the art equipment we take your brand to the people.

Fabric Shop

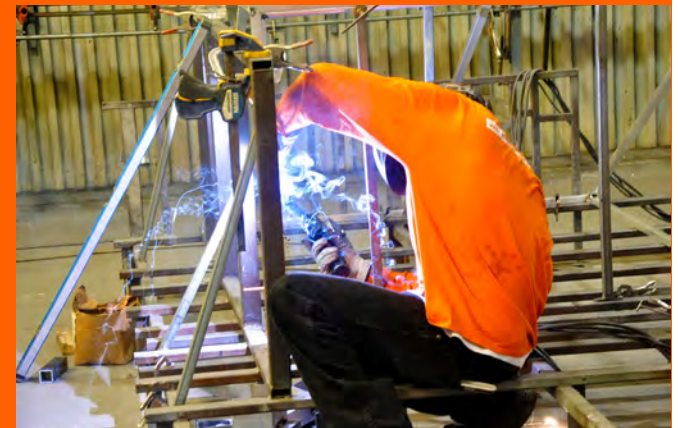

The fabric shop professionals have an average of 20 years sewing experience, and are trained to utilize our state-of-the-art heat sealing machinery – which enables us to produce the very highest quality and longest lasting fabric welds. The 124" Eastman Digital Cutting Table sets us worlds above by providing the most consistent and accurate patterns in the industry. The best technology + human experience really makes our products better.

Metal Fabrication Shop

Where others cut corners, Coastal Canvas Products always uses structural tubing and pipe in our awning frames. We solid weld every frame using TIG & MIG welding for beautiful welds and engineered performance. We use only radius cornered square tubing and round pipe which provides a smoother transition for the fabric, increasing the life span, and elevating the overall look. The frame shop is staffed with Certified Welders and the most modern equipment available. With years of experience and expansive capabilities we really do make our products differently, (better).

The Technical Department

Ensuring "best practices", proper manufacturing methods, quality control, OSHA safety standards, and customer scheduling to assure every good plan comes together.

Residential Awnings

Cool functionality for your home. Fabric Awnings, Retractable Roofs, and Canopies create attractive, inviting outdoor areas for people to gather while protected from the sun. In addition, fabric structures provide cover during inclement weather, and are more economical to build and maintain than comparable masonry and wood structures. Create utility in your designs with fabric Awnings and Canopies. Awnings manufactured by Coastal Canvas Products insure that your Awning will be produced and installed by trusted and reliable professionals using the highest quality materials and best practices. We use guaranteed fabrics and stand behind our manufacturing that will enhance your home in numerous ways.

Can reduce cooling costs and save energy consumption.

In our Low Country climate, homeowners can expect to save up to 25% of their cooling energy costs just by using an Awning. Awnings can directly affect energy use by simply blocking the sun. Heat gain through windows is one of the reasons that buildings need air conditioners.

Outdoor comfort. Enjoy being outside. Consider an Awning over your deck, patio, or porch and expand your livable space. You will become shaded from the hot sun rays in the heat of the summer as well as provide safe outdoor protection on a rainy day.

Beautiful fabrics up your backyard appeal - blend your indoors and outdoors. Create a seamless transition from your interior to the exterior by coordinating fabrics from your living room to your porch. Choose from any of our 250 + outdoor durable fabrics that are guaranteed to withstand the elements by providing utility and beauty to your indoor & outdoor space for many years to come. This is your chance to add color to your home and spice it up!

Provide weather protection for your family. Your family deserves the best. Their health is your number one priority. Protect them from the sun's harmful UV rays and enjoy the outdoors at the same time with a beautiful, easy, home enhancement - an Awning made especially for your deck or patio.

Retractable

With a Coastal Canvas Retractable Awning, you control the shade. Enjoy your outdoor living area more than ever with the convenience of total shade control. Extend and retract your Awning with the turn of a handle or push of a button - it's that simple. Your Awning can be extended fully, partially, or retracted depending on the amount of shade you need or how much sun you want.

Commercial Awnings

Protection

In addition to their aesthetic appeal and marketing value, our Awnings, Canopies, and screens can offer protection for you, your products, and your customers. The sun can be harmful to your products and furnishings, and uncomfortable for your employees and customers. Awnings and Shades can add a bright, unique, aesthetic flair to your business and protect your space from the sun, without sacrificing the natural light. Canopies and Awnings can offer protection from rain that can make hard flooring slippery as people track water indoors. Canopies and Awnings create a sheltered entrance to your business that can help alleviate the risk of slipping.

Branding

Your Brand is our brand! Our Designers are ready to help shape the right visual solution for your business. Your brand is your business' face to the world. It's what your organization is all about, how you communicate that to people, and how they perceive you. We know how important your brand is, and how much work you've put into building it, our extensively trained design and sales team can help you find the best way to express your brand through awnings and graphics.

Signage

Make it easy for your customers to find you! Awnings identify your business so you can stand out from the competition. Let your Coastal Canvas Products Awning work for you 24 hours a day, 7 days a week, attracting the attention of anyone nearby. It will let potential new customers know you are there, and who you are; and will keep your business fresh in the minds of all existing customers whenever they're in the area.

Hanger Options

Metal Canopies

Fabricated from aluminum or steel and serve both functional and decorative purposes. We have a variety of colors and finishes including durable powder coated finishes available. Metal Canopy designs can incorporate the use of glass or polycarbonates, extruded aluminum pans, plate aluminum and roll formed standing seam styles. Our gutter systems are built into the design to direct the flow of rainwater. Metal Awnings are a great solution for retail storefronts, entryways and protective walkways. They are also used as decorative sun and rain protection over windows and doors and in parking and loading areas. Residential applications include porch covers, patio covers, walkways, entries, and carports.

The Studio Homes
at Ellis Square

Our detailed designs are engineered and built to meet or exceed wind load requirements, seismic and snow load, depending on the location of the project. We offer options that can be incorporated into the design of any metal canopy; outdoor cooling or heating systems, ceiling fans, retractable solar shades and weather curtains.

Hanger Rod Canopies. Aluminum metal structures commonly supported by rods attached back to the building designed with formed metal sheets, louvered slats, or a combination of both styles. Hanger Rod Canopies are typically mounted to flat wall surfaces; however, may be fabricated to wrap around building perimeters, or attached to recessed entryways.

Standing Seam Metal Roof Awnings. Enhance any structure. Standing Seam Metal Awnings have a durable finish which allows for many years of low maintenance performance. Standing Seam Metal Awnings utilize standard awning frames made of aluminum tubing. Each frame is covered with standing seam metal panels that come in variety of widths, gauges, colors, and finishes including powder coated, Kynar, Hylar, or Galvalume.

Retractable Roofs

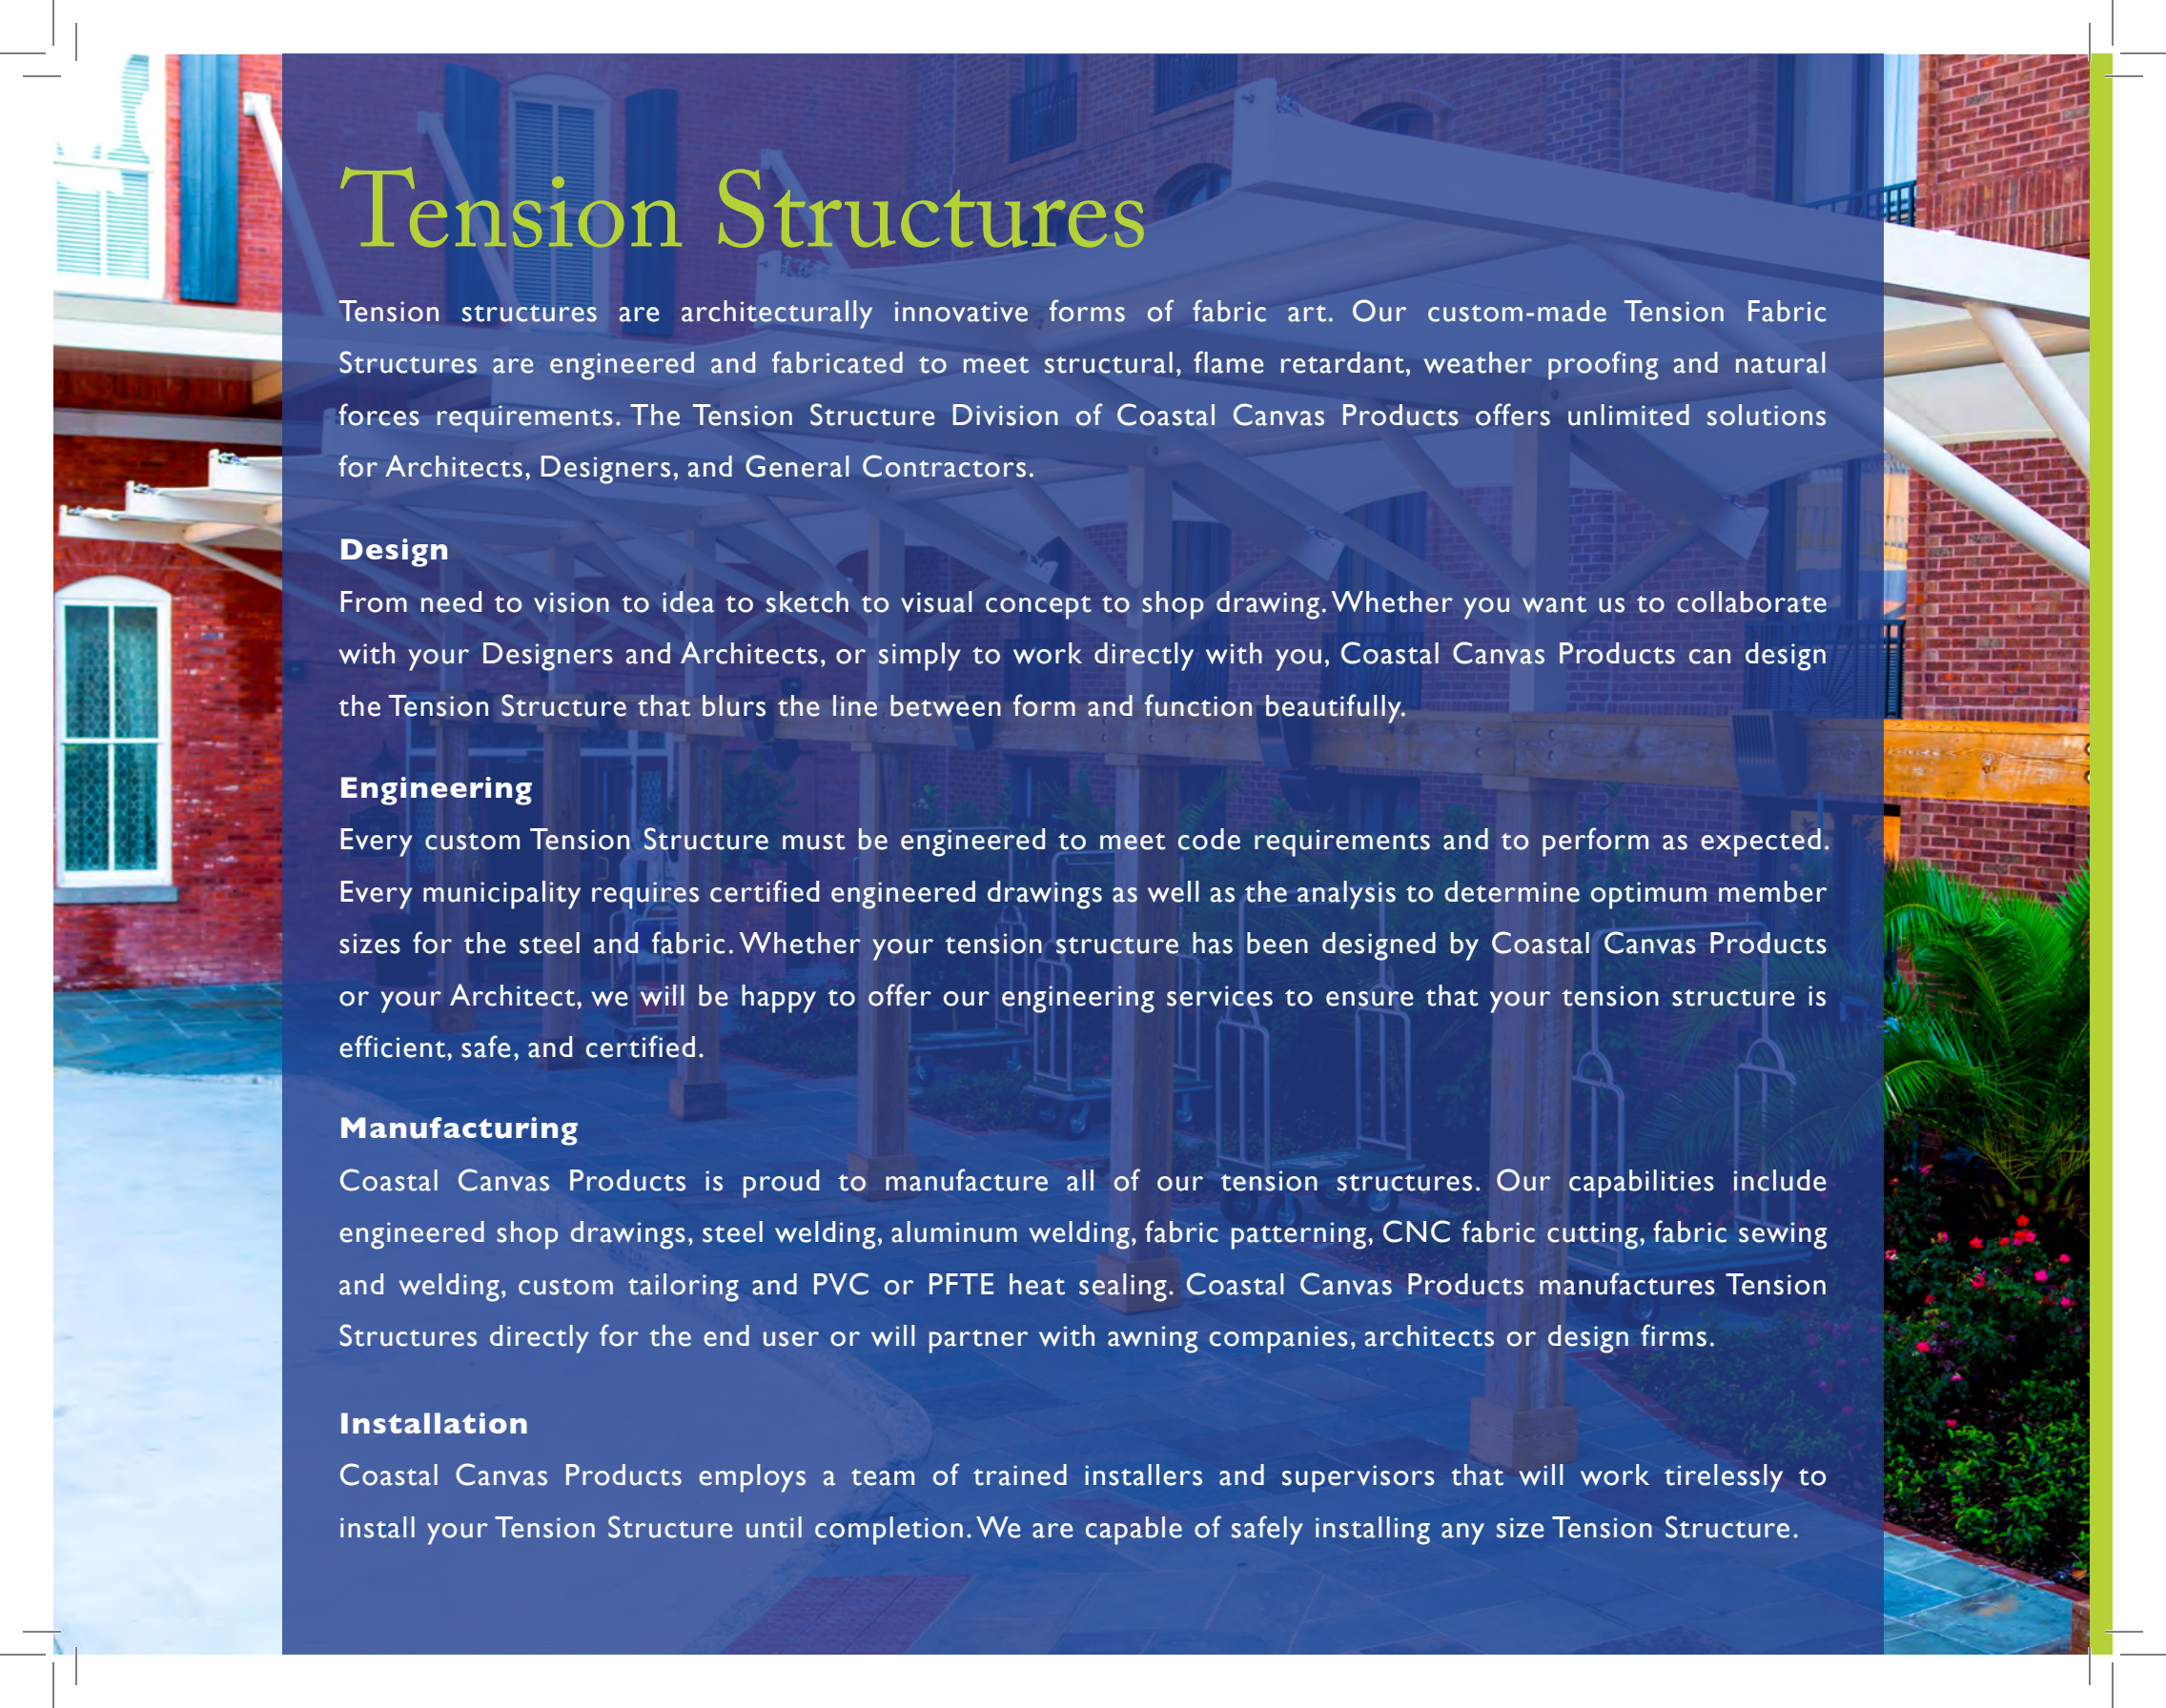

No matter what type of occasion, whether it is for a commercial or residential application - we want you to live life uninterrupted by weather. A retractable or louvered roof system blocks the sun's powerful rays or unexpected rain showers with louvers or fabric panels that moves at your command for full sun, filtered shade or solid rain protection. A louver system is an innovative system of rotating gears drives the louvers into the perfect position for total flexibility of ventilation, sunlight or rainfall protection. Designed with extruded aluminum and stainless steel components the system is strong, lightweight and durable. The low maintenance louvers can be positioned anywhere within their 160 degree range of motion for the exact amount of protection or ventilation desired.

Cabanas

Our custom designed and manufactured Cabanas are built to last for many years so you won't need to replace them every season. In fact, our durable construction stands up to frequent use by hospitality and commercial use and our fabrics retain their shape and color for many years – we guarantee it. Plus, with our exquisite and versatile design possibilities, you'll choose quality acrylic fabric and a complete spectrum of frame colors, then combine shade form, curtains, and accessories – to create a shade solution that's just right for you.. User-friendly, refined technology, high-grade materials and solid manufacturing mean you'll enjoy years of cool comfort, and sun protection. Many standard sizes with unlimited fabric combinations are ready to assemble and ship anywhere packages are available.

Tension Structures

Tension structures are architecturally innovative forms of fabric art. Our custom-made Tension Fabric Structures are engineered and fabricated to meet structural, flame retardant, weather proofing and natural forces requirements. The Tension Structure Division of Coastal Canvas Products offers unlimited solutions for Architects, Designers, and General Contractors.

Design

From need to vision to idea to sketch to visual concept to shop drawing. Whether you want us to collaborate with your Designers and Architects, or simply to work directly with you, Coastal Canvas Products can design the Tension Structure that blurs the line between form and function beautifully.

Engineering

Every custom Tension Structure must be engineered to meet code requirements and to perform as expected. Every municipality requires certified engineered drawings as well as the analysis to determine optimum member sizes for the steel and fabric. Whether your tension structure has been designed by Coastal Canvas Products or your Architect, we will be happy to offer our engineering services to ensure that your tension structure is efficient, safe, and certified.

Manufacturing

Coastal Canvas Products is proud to manufacture all of our tension structures. Our capabilities include engineered shop drawings, steel welding, aluminum welding, fabric patterning, CNC fabric cutting, fabric sewing and welding, custom tailoring and PVC or PTFE heat sealing. Coastal Canvas Products manufactures Tension Structures directly for the end user or will partner with awning companies, architects or design firms.

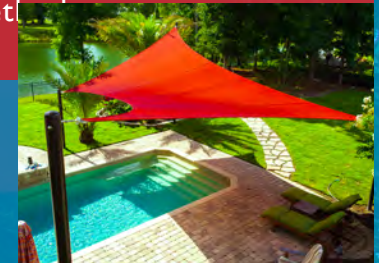

Installation

Coastal Canvas Products employs a team of trained installers and supervisors that will work tirelessly to install your Tension Structure until completion. We are capable of safely installing any size Tension Structure.

Shade Sails

We can't get enough of Shade Sails! Simply put they are fabric architecture at its best. Within a series of Shade Sails a Canopy is sculpted out of fabric through overlapping geometric shapes that provides sun shade and UV protection for playgrounds, swimming pools, backyard patios, and other outdoor living spaces. The inward curves along the sides of each shade fabric panel are engineered to help spread and distribute the tension placed at each connection point evenly over the entire sail. The result is a sail shaped sun shade capable of providing functional shade in an iconic architectural form. Coastal Canvas Products Shades Sails are made in Savannah, GA with the very highest grade of materials and proven fabrication methods.
