

SKYLINE SYSTEMS, INC.

High-Quality Metal Structures Manufactured And Installed by Experts

Founded in 1997, **Skyline Systems, Inc.** is an industry leader in the supply of engineered, factory built, modular architectural building components. Our vertically-integrated system provides you with a one-stop, catered solution for the entire process. Starting with initial Design Consultation, Engineering Services, CAD/Submittals, Fabrication, Powder Coating, Logistics and finally, Installation onto your building. Our industry-leading products and time-tested processes allow us to provide the right product, on time, every time.

Skyline Systems, Inc. provides a complete solution for all the decorative metal scopes on your projects, including bolt-on balconies, juliette decks, patio guards, railing and fencing, privacy panels, canopies, sunshades, trellises, greenscreens and many other custom-fabricated structures. Our focus on aluminum structures allows for distinct advantages in lighter weight and longer lasting durability. Our best-in-class factory powder coated finish meets AAMA 2604 for the best finish durability available in exterior-use decorative metal scopes.

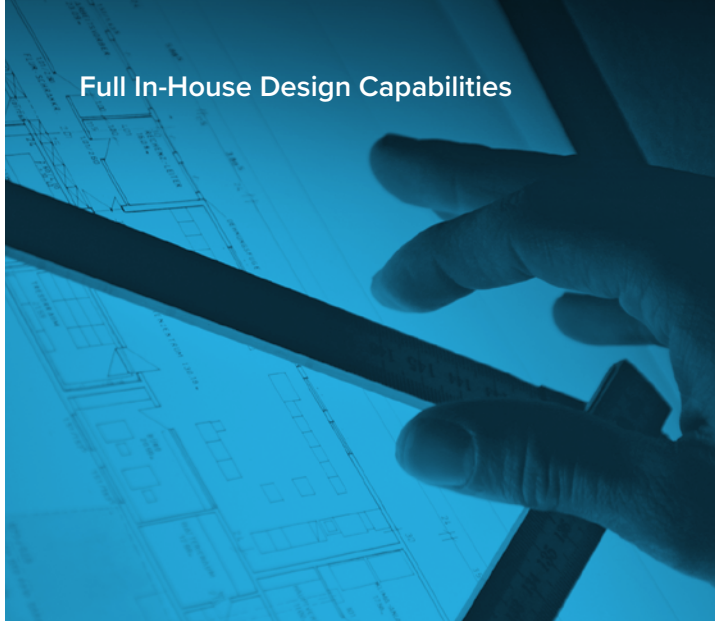

Our in-house design and engineering team is available for early project consultation to assist your design team in finding the right solutions to achieve your vision. From custom pattern cut panels to highly complex welded structures, Our in-house waterjet and highly-skilled craftsmen allow us to tackle the most demanding custom projects.

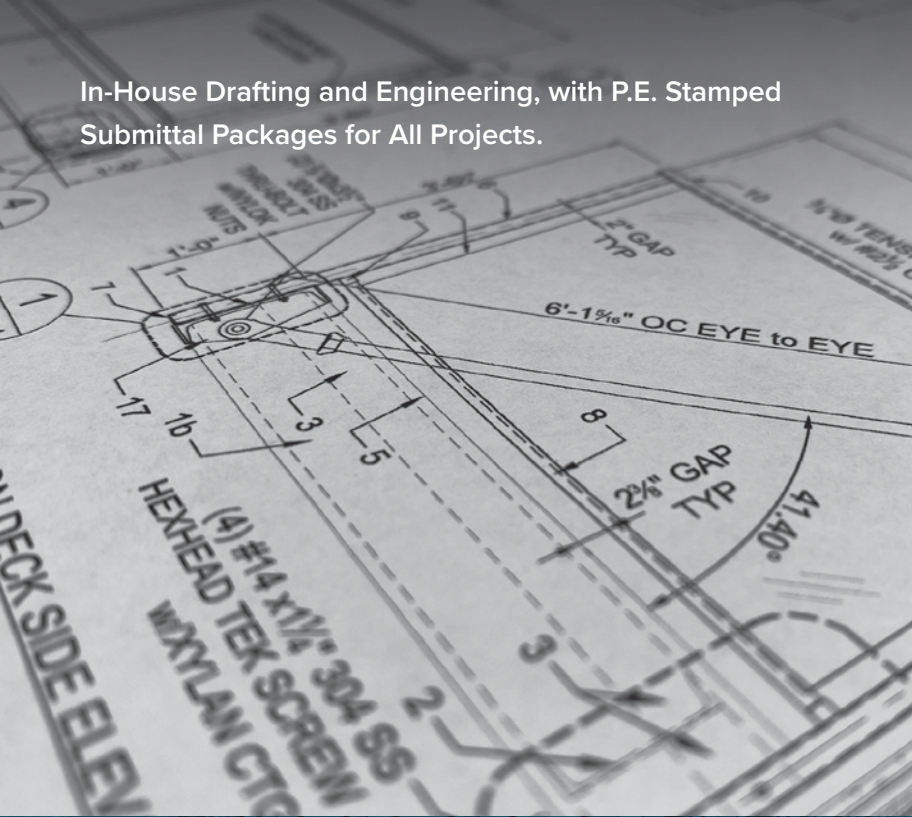

Skyline supplies product anywhere in the USA, we have contractor licenses and our own installation crews in Washington, Oregon and California.

OUR SERVICES

Skyline Can Take Your Vision from Design to Engineering and Installation

Involve Skyline early in the design process and we will help you maximize the benefits of using factory built, modular architectural components on your project.

In-House Drafting and Engineering, with P.E. Stamped Submittal Packages for All Projects.

The image shows a detailed architectural drawing of a deck railing system. It includes various dimensions and specifications such as "6'-1 1/8\" OC EYE to EYE", "2\" GAP TYP", "41.40°", "2 1/2\" GAP TYP", and "(4) #14 x 1 1/4\" 304 SS HEXHEAD TEK SCREW MAX PLAN CTC". The drawing is labeled "DECK SIDE ELEV" and "MAX PLAN CTC".

All Manufacturing and Powder Coating Completed In House to Ensure the Highest Quality Control and Fastest Lead Times.

The image shows a worker wearing a full-body protective suit, a respirator mask, and safety glasses. The worker is holding a spray gun and applying a coating to a metal railing. The background is a dark, industrial setting.

Our Full-Time Installation Teams Provide On-Site Installation Services in WA, OR and CA.

The image shows three workers in safety gear (hard hats, safety harnesses, and safety glasses) installing a railing system on a building. They are standing on a metal framework and are working on the railing. The background shows a multi-story building with many windows.

For Projects Nationwide, We Can Send Experienced Personnel On-Site to Provide Hands-On Product Training and Assistance, for Installation by Your Local Crew.

The image shows a welder working on a metal structure. The welder is wearing a protective mask and gloves. A bright light is visible from the welding process, and there is a lot of smoke or steam rising from the work area.

OUR PRODUCTS

Balconies

Skyline Systems, Inc. specializes in the design, manufacture, and installation of balconies and juliets. Aluminum balconies are a great investment for your building, adding extra value that is time tested, engineered, and guaranteed not to rot, rust or warp. Maintenance-free aluminum balconies are extremely durable, light-weight, waterproof and built to code. All components are powder coated with your choice of 42 RAL colors. Included with up to a 10-year warranty, our balconies are your preferred choice.

Railings

Discover Skyline's high-quality, precision engineered, factory-built and powder-coated railing systems. At Skyline, we work with you to achieve your ultimate design vision. We can customize any style of railing for your project. From classic picket designs to modern point supported glass railing, tensioned cable systems to custom-perforated or lasercut patterns. **Our railings stand up to any climate—the hot sun of California, snow and ice of the Northeast, or damp weather of the Pacific Northwest.** Depending on your needs, Skyline will take your vision from design to installation, in compliance with applicable building codes and engineering standards.

Canopies & Awnings

Protection from the elements is critical. Our engineered canopies and awnings allow you to protect areas from sun and rain in a beautifully designed package. Skyline's aluminum sunshades, canopies and awnings are great for reducing power bills and eyestrain for your inhabitants. Our custom-engineered systems are built to your specifications, designed to create a beautiful solution to a classic problem.

Fencing

Beautiful aluminum fencing can elevate a project, whether it be metal pool rails, landscape fencing, or simple aluminum dividers. Built to code, engineered and installed to look great, our fencing and privacy panels will help separate and provide solace for your tenants, providing your projects the desired look. Our screening comes with a variety of infills, including custom aluminum pattern cut screens, picket fencing, metal mesh panels, and obscure glass dividers.

Trellises

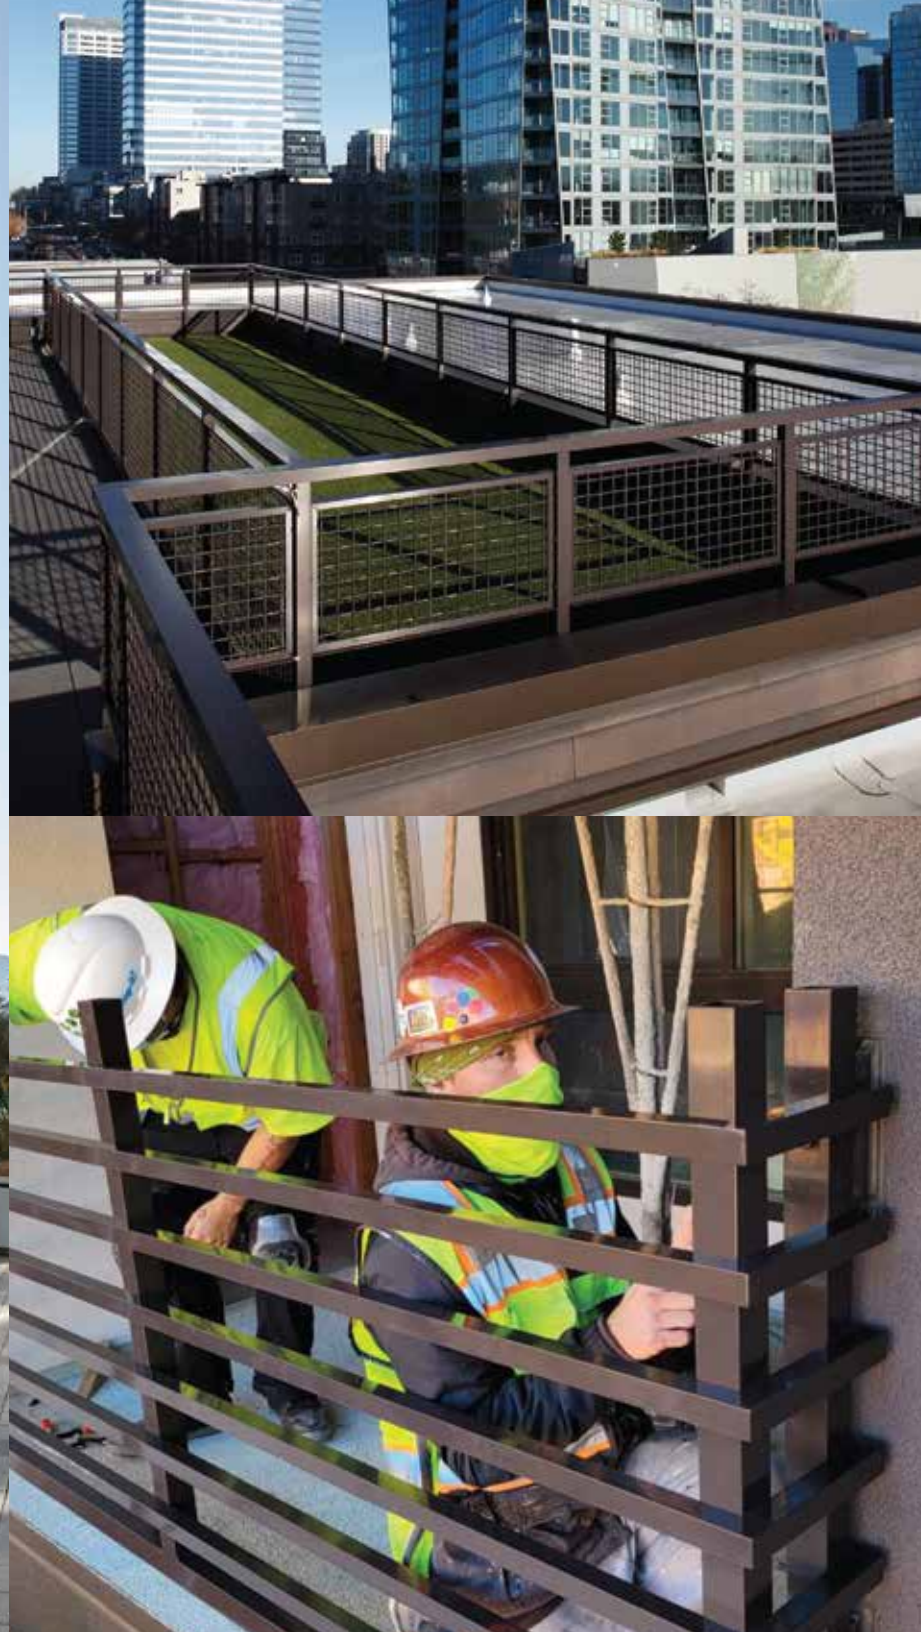

As opposed to wood or steel, aluminum trellises are an extremely valuable option. Skyline trellises are non-corrosive and resist rotting, warping or sagging. They are lightweight and easy to install. Weatherproof, maintenance-free, and with over 42 stunning colors available, Skyline's custom designed aluminum trellises are an amazing addition to your project that will stand the test of time.

Architectural Screens

Architects, owners, as well as residents are increasingly sensitive to a project's carbon footprint, lifetime energy costs, and contribution to the heat island effect. Greenscreens, sunshades and trellises have become important design features since they can cut summer solar heat gain and improve winter heat retention. Skyline designers and expert installers can deliver these durable, high-quality, eco-friendly solutions to provide your project important ecological benefits.

Aluminum Outrivals Steel

Wood and steel cannot match aluminum's superior physical properties and excellent sustainability.

LIGHTWEIGHT AND STRONG

Aluminum provides an excellent combination of strength and light weight. When incorporated into the building design, aluminum decks and railings allow for significant savings in the building structure.

MAINTENANCE

Aluminum is inherently low maintenance as it does not rust or rot like steel or wood. Having excellent corrosion resistance and due to its availability in a wide variety of powdered coated colors, aluminum is virtually maintenance-free. Aluminum requires no preventative measures to extend the life of the product.

ENVIRONMENTALLY FRIENDLY

Aluminum is 100% recyclable, and it retains its properties indefinitely. Nearly 75% of all aluminum ever produced is still in use today. Aluminum has a smaller carbon footprint than high strength steel.

WATER INTRUSION

With our knife plate attachment details, water intrusion risk and damage is virtually eliminated.

EASY TO INSTALL

Compared to steel, aluminum is easy and faster to install. The preassembled and lighter weight product allows for faster attachment to the building and less disruption to the project's timeline.

Why Choose Skyline?

Skyline Systems, Inc. has exceeded our expectations on many projects. From ITB to TCO they have been professional, clear, and concise. With attention to detail and a clear understanding of the entire build process, we will work with them on many more projects. Skyline has assisted in many aspects of the design process and made things very cohesive. They are truly a partner in business!

Chinn Construction, LLC

This is the fourth consecutive project that I have done with Skyline. Skyline pays close attention to detail and produces very high-quality work, they have been very helpful in providing turnkey engineering, fabrication, and installation services for various major and minor aluminum fabrication scope, which has proven to be extremely valuable and helpful. It's a pleasure to work with Skyline and I'm looking forward to future projects together.

Exxel Pacific General Contractors

We've been fortunate to work with Skyline on several high profile projects in Seattle and Denver. They not only provided early design and cost guidance to steer our design/development teams, but achieved additional cost savings at contract time. We found both their business development and estimating groups to be responsive and timely with our requests and generous with their assistance on detailing and structural guidance. We would not hesitate to recommend them.
