

GALLERY INTRO

Green Living Technologies International, LLC, (GLTI) is a world leader and second only to nature in bringing green technology to life, providing individuals, architects and companies around the globe with innovative “living architecture” in the form of green roofs, green walls and vertical farms. Over the last two decades, GLTI has set the standard and influenced the birth of the green industry. The company’s expertise has brought GLTI to 13 countries and produced countless major projects from Alaska to the Middle East, including Hawaii’s largest living green wall and Major League Baseball’s biggest Batter’s Eye at the Minnesota Twins’ Target Field. GLTI’s environmentally-safe, patented green living products are fabricated from recycled aluminum and stainless steel as preferred by LEED and are made in the United States and Canada. They are designed to conserve energy and eliminate waste, while warrantied to last a lifetime.

VERTICAL FARMING

GREEN WALLS

With more than two decades of industry-setting standards, GLTI is on the cutting edge of the design, installation and maintenance of interior and exterior green walls that are made in the United States and Canada guaranteed for a lifetime of

environmental benefits and green beauty. GLTI has pioneered its patented green living walls, which are available in wall-mounted and free-standing systems. Unlike other systems made of bags, plastic and felt, GLTI's green living walls are made

from aluminum and stainless. Unlike plastic there is no threat of expansion or degradation of material, thereby eliminating health, safety and maintenance hazards. The patented design is a class A fire rating, and Miami Dade approved.

GREENROOFS

GLTI's patented Green Roof Panel System features a variety of green roof plants, offering an all-in-one, built-up green roof designed to control storm water runoff, improve energy conservation and increase air quality.

Green Living Technologies' green roofs utilize organic bioSoil, which are free from synthetic chemicals and fertilizers and eliminate environmental problems caused by fertilizer runoff.

With performance and design flexibility, and the additional ease of modular installation, GLTI's proprietary green rooftops are fully manufactured within the United States and feature lifetime warranties.

VERTICAL FARMING

GLTI utilizes a full-circle approach to the vertical urban farm, bringing organic farming indoors in order to control the environment for herbs, vegetables and medicinal cannabis crops. GLTI's patented Vertical Cultivation System (VCS)[®] recycles 100% of the organic and inorganic materials. In this way, GLTI increases production through its vertical orientation,

while reusing all materials with virtually zero wastewater and little in the way of new inputs. The VCS comes complete with patented GLTI Plug and Play living walls, advanced environmental controls, proprietary full spectrum LED, computer monitoring and automation. The Plug and Play is manufactured from recycled stainless and aluminum, making it easy to sanitize

between grow cycles as to insure crops are 100% disease and pest free. Beyond its vertical crop farming applications, GLTI's VCS is helping to revolutionize the medicinal and recreational cannabis industries, providing high-quality and consistent cannabis product to the marketplace faster and more cost-effectively than any other growing system in the world today.
