Sustainability

Tournesol is working towards environmental, economic, and social sustainability. It is our long-term commitment to impactful change, and we're only at the beginning.

This past year, we launched several products that aligned with our green vision. Our Wilshire Planters and Kitsap Modular Planter Walls are now available in aluminum, and our Bioretention Planters have improved functionality and design flexibility.

Seeds of Change Program

With deep roots in our local communities, we seek opportunities to reflect our dedication to improving the world around us. We recognize our responsibility to give back, and we're eager to help. This is the inspiration for our new community program, Seeds of Change. Our support extends to product donations, discounts on our offerings, and direct assistance in the form of helping hands to support your project. Contact us for more info.

Let's create change together!

NEW FEATURES

Bioretention Planters

MODULAR PLANTER WALLS

Kitsap

A modular metal planter wall system that allows designers to sculpt unique spaces.

Kitsap is available in powder-coated aluminum, powder-coated steel, and weathering or pre-weathered steel.

See page 42 for more information about Materials & Finishes.

Kick Start

Simplistic by design, Tournesol has created a kit-of-parts to help get you started. To download, visit our CAD & Models page and use the drop-down menus to select Pots & Planters and Kitsap, then download the 'Kitsap Kit-of-Parts.'

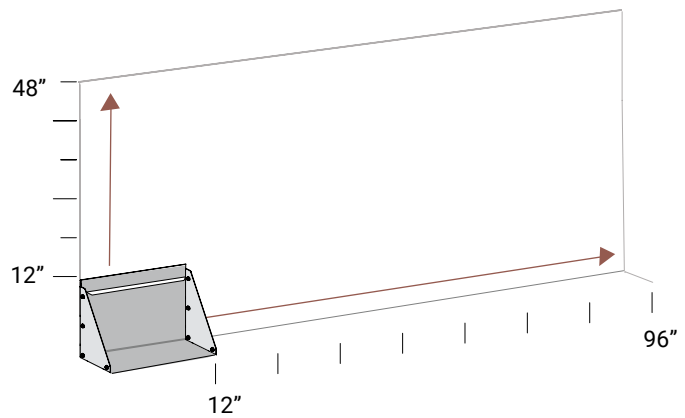

Modify

You can use plans and drawings of any kind to start your project, and a Tournesol Advisor will connect with you to discuss details.

Set length, height, angles, and curves to suit your plans.

Consult

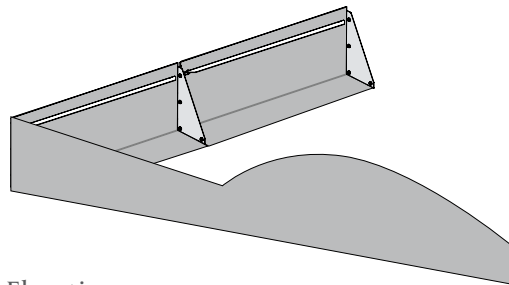

If you prefer, you may choose to start with your plans and elevation drawings. Tournesol Advisors are happy to provide planning and specifying assistance, and can review your plans at any point in the development process.

Dimensions

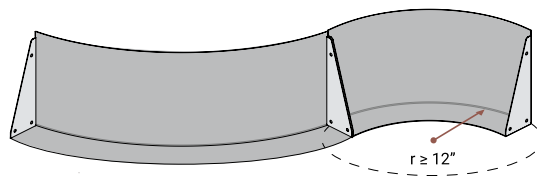

Unit height 6" - 48".

Runs of any length, units can vary from 12"L to 96"L.

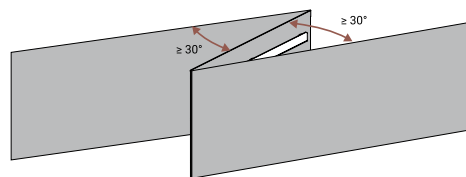

Elevation

Wall heights can change in elevation from 6" - 48".

Curves

Specify any arc with a radius $\geq 12"$.

Corners

Specify an inside or outside corner $\geq 30^\circ$.

Standard Options

Standard options can be added to many of our products to meet project needs. Note that we have capabilities beyond the options listed and we can create products to meet your exact specifications. For something off-menu, speak to a Tournesol Advisor.

Irrigation Systems

Tournesol's container irrigation systems are the best in the business, and one of the values of working with Tournesol. Read more about Irrigation on Page 34.

Change in Dimension, Angled Length Modification

Don't see the size you're looking for? Many of our planters can be ordered with a change in one dimension as a standard option.

Accessory Pockets

Accommodate lighting, audio, power, and data. View our Fixture Compatibility Chart to use a Standard Accessory Pocket. Custom Accessory Pockets are available for fixtures not appearing on the compatibility chart.

Scoops

Square and rectangular planters can be connected end-to-end to create linear runs. "Scoops" lower adjacent planter walls allowing them to hide beneath the soil surface, creating a continuous planting along the top.

Casters

Recessed casters discreetly provide mobility and are available for many of our planter collections. Planters receiving casters are built with reinforced raised bottoms, so that casters hide under skirted planter walls.

TourneSeal

Need it watertight? Specify TourneSeal, our waterproofing solution. This is highly recommended for planters that will not have drain holes.

Lift Channels

Moving large planters on the job site can be challenging. By adding lift channels, you can safely and quickly move planters on site. We have two configurations for lift channels: pallet jack or forklift.

Toe Kick

Planters with toe kicks (reveals) are available in several standard sizes. In addition, some products may be configured to add a toe kick, such as Wilshire Planters in Steel.

Matching Saucer

Capture runoff from drain holes to prevent surface staining. Available in GFRC and FRP with matching finishes. Learn more about Saucers on Page 35.

False Bottom

Reduce soil volume and weight in planters by adding false bottoms. False bottoms are 24" below the top of the planter unless otherwise specified. If other depth is needed, please contact your Advisor.

Drain Holes

Standard GFRC and Steel planters come with drain holes, but FRP planters come without. All our pots and planters are available with or without drain holes, simply specify your choice.

Bottom Reinforcement

When specifying FRP planters that won't have full basal support after installation or planters that will be anchored to the underlying surface, bottom reinforcement is recommended.

Tie Downs

Tie Downs are available to hold trees in place. These are available for planters in all our materials. Ties are added inside planters at the midpoint. Ties are evenly distributed to keep tree centered.

Custom Color

Tournesol offers a broad range of standard colors for GFRC, FRP, and Powder-Coat, but we also offer custom colors depending on product and volume. Contact a Tournesol Advisor to discuss your custom color needs.

WOOD CLAD PLANTERS

Boulevard Collection

Boulevard Planter with Greenscreen® Trellis

The durability of fiberglass
with the warmth of wood.

A fiberglass liner keeps moisture from
the soil, ground, and irrigation away
from the cladding, extending the life and
beauty of the wood surfaces.

tournesol.com/advisors

Standard Modifications

Product modifications and options such as integrated lighting, tree tie downs, casters, light pockets vary by product and size. Please schedule a quick chat with an Advisor to discuss which options are available for your product selections.

Site-Specific Products

Building off our Wilshire, Kitsap, Boulevard, and Greenscreen® systems, we can fit your as-built site conditions with made-to-measure products.

Our Advisors and design engineering team collaborate with you to construct solutions that meet project needs. We can create access for plumbing, electrical, and other utilities, while aligning with the other architectural elements and your design vision.

Custom Fabrication

We have a dedicated team specializing in custom fabrication. Our project managers and engineers work in metal, wood, GFRC, and FRP, and can combine these materials to suit your vision. When required, we can work with structural engineers to gain necessary approvals. Our experience allows us to confidently stand behind all our custom work. Our custom experience includes installations at airports, large-scale building developments, and major metropolitan parks.

MANAGE STORMWATER
FILTRATION & FLOW RATE

Bioretention Planters

Bioretention Planters act as an on-structure or at-grade organic filter.

Slow the flow. Reduce peak discharge rates.

Tap into Our Expertise Take a CEU Course

We are experts in large-scale planters, specializing in developing planters for on-structure installation. Working with Architects and Builders since 2014 to develop our Bioretention Planters, we know how to maximize water volume storage with minimum square footage, while considering other utilities and amenities.

INCLUDED WITH PLANTER

1. Planter
2. Clean-out
3. Drainpipe
4. Overflow
5. 4" Dia. Outlet

OPTIONAL ACCESSORIES

6. Splash Box
7. Level Spreader

CUSTOMER SUPPLIED

8. Media
9. Landscape Fabric
10. Fabric Sleeve (optional)

Free up building footprint & free up roof deck footprint.

Provide water filtration. Provide water quality treatment; remove suspended solids (turbidity), metals, nutrients.

Increase groundwater recharge through infiltration.

Can be built to retain specific water volume.

Reduce peak discharge rates.

Allows use of reliable monolithic membrane waterproofing below.

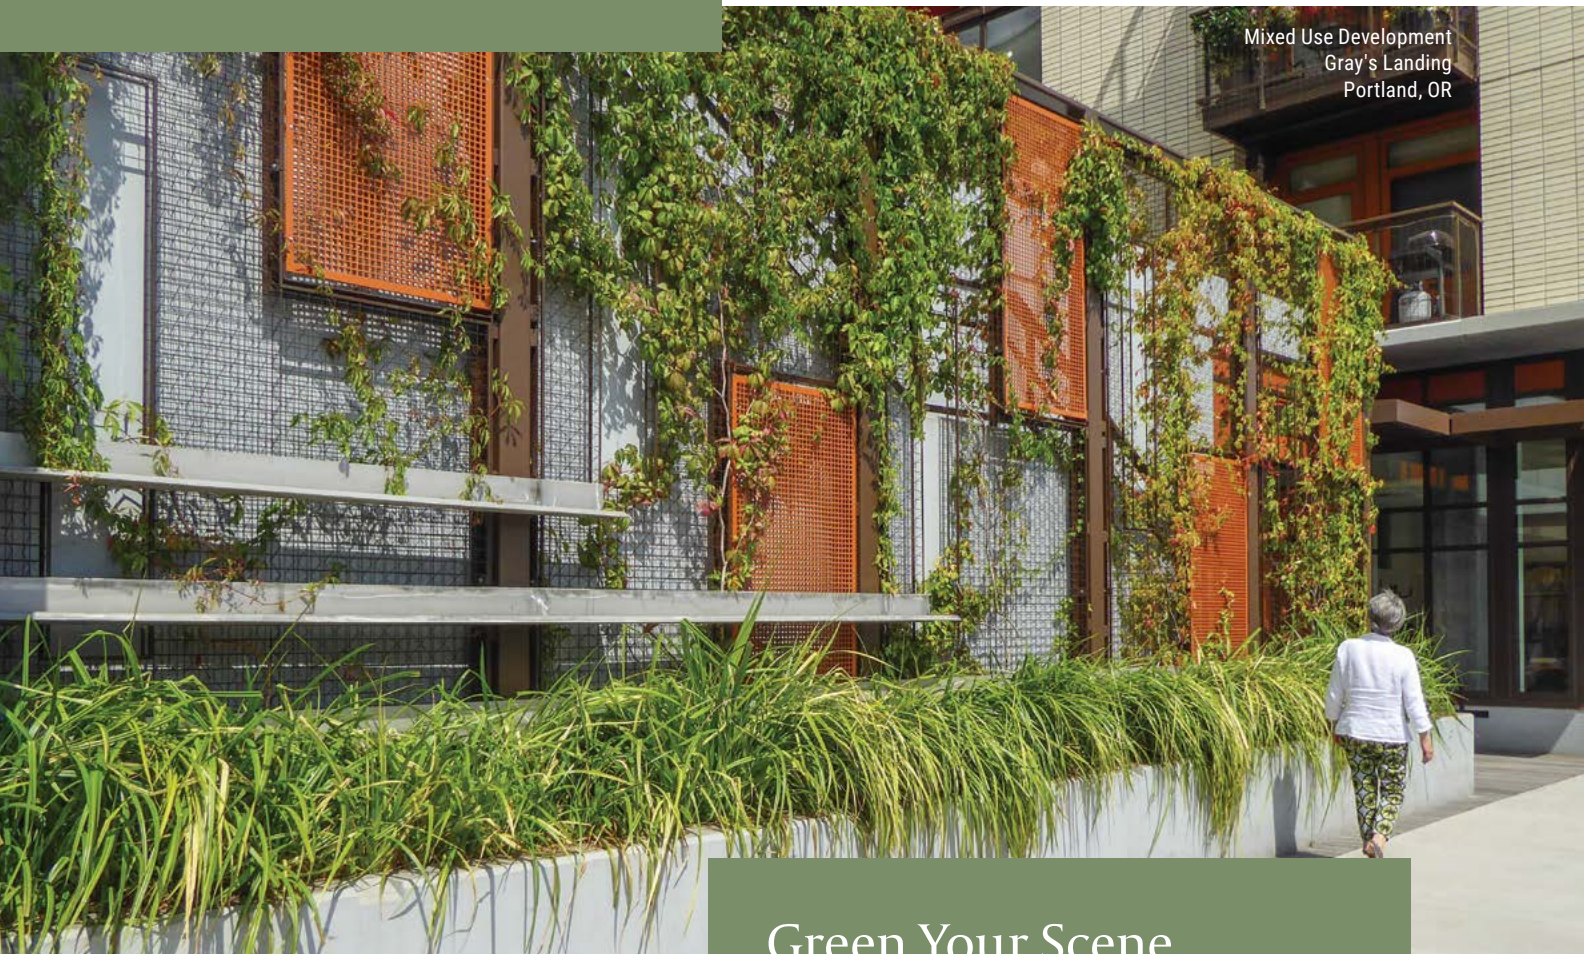

Avoid complicated and expensive cast-in-place construction.

Able to match planters and site furnishings.

Connect planters together for one continuous bioretention system.

Can accommodate irrigation, power, lighting, and audio.

Can support cantilever benches.

Greenscreen® is a recognized innovative leader in commercial trellis systems, redefining green facade excellence since 1993. The 3D design, crafted from metal wire, supports vines, forming vibrant living works of art that range in scale and complexity. Greenscreen's modular panels create vertical gardens and green facades and provide shade for various applications and environments. A pioneer and innovator in sustainable design, our trellis panels are made domestically from recyclable materials and have third-party verified Health Product Declaration (HPD) and Environmental Product Declaration (EPD), demonstrating our commitment to sustainable practices.

Tournesol acquired Greenscreen in 2023, and the two companies share a common vision of enhancing the built environment with sustainable and beautiful landscape elements.

Bring Your Projects to Life with Greenscreen® Trellis

Engineer nature with our Trellis panels, blend aesthetics with sustainability by incorporating greenery and promoting biodiversity in building facades. These panels not only reduce urban heat, lower air pollution, and provide natural shade, but also create more comfortable spaces. Transforming walls into vibrant, green surfaces enhances visual appeal and environmental performance. The leafy structures also act as natural barriers, adding an organic touch to architectural forms while offering the benefits of biophilia.

Our third-party verified Health Product Declaration (HPD) and Environmental Product Declaration (EPD) documents prioritize environmental responsibility, demonstrating our commitment to sustainable practices.

INFILL

Montara

Elevate the space where landscape and architecture meet with bold, monumental, lightweight concrete planters.

A photograph of a modern outdoor terrace. On the left, a wall made of vertical wooden planks runs along the edge. Above it is a glass railing. In the foreground, three tall, columnar cacti are planted in large, white, tiered concrete pots. The terrace floor is a smooth, light-colored concrete. To the left, a portion of a wooden table and black metal chairs is visible. In the background, a clear blue sky meets a deep blue ocean. A small white sailboat is visible on the horizon. Rocky shorelines are visible on both sides of the terrace.

Harlie

Irrigation, Drainage & Root Barrier

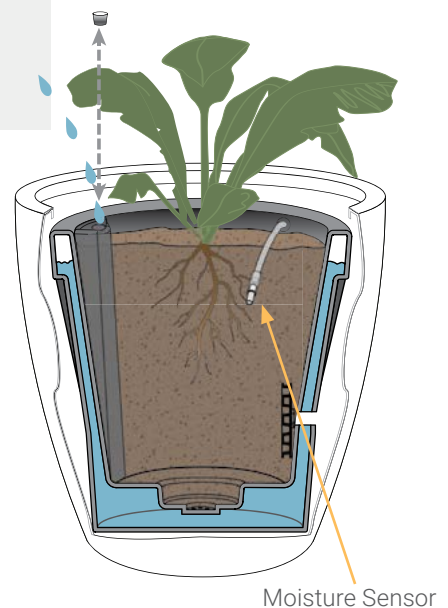

Why Use Tournesol's Self-Watering Irrigation?

They keep plants healthy, strong, and stress-free by balancing moisture and oxygen in the soil.

They allow extended maintenance intervals.

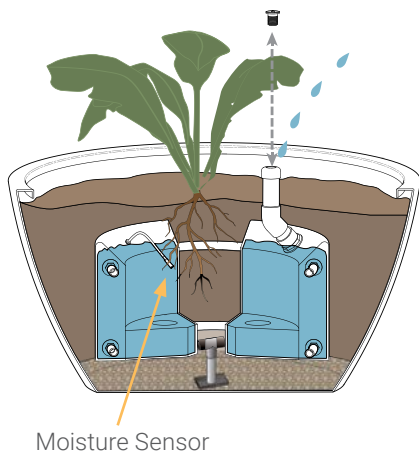

Their closed system prevents the possibility of water damage for interiors.

The overflow drainage adapter for exterior applications keeps excess rainwater from building up.

CWI & CWC Irrigation Inserts

Our inserts are self-watering systems designed to be used in cylindrical and tapered decorative pots. Tournesol's proven vacuum-sensor watering system precisely controls moisture levels, watering the plant when the soil dries. The large reservoir allows for refill intervals up to four times longer than typical hand watering. This moisture control, when combined with subirrigation, makes the most water-efficient irrigation systems.

CWM Modular Insert System

Our versatile modular system is designed for large planters. Reservoir modules are linked together and installed before filling with plants and media. The hand-filled reservoir utilizes Tournesol's vacuum-sensor system to precisely monitor the soil moisture in the container, giving plants exactly the amount of water needed. The modular system provides optimal flexibility for use in virtually any shape planter, will not interfere with lighting or other electrical connections, and requires no plumbing.

B Series Bollards

DIAMETER

B-1 and B-2 are available in 4", 6", or 8" Dia. B-4 is available in 6" or 8" Dia. B-3 and B-8 are available in 6" Dia.

HEIGHT

B Series are available in 30", 36", 42", and 48"H.

THICKNESS

B Series bollards are manufactured from schedules 10, 40, or 80 pipe for increased strength.

MOUNTING

All B Series bollards are available for embedded, surface, or removable mounting.

DESIGN DETAILS

Collar options are available for B-1. Reveal options are available for B-4.

Simple Bollards

These fully welded, hot-dip galvanized bollards are 30" high and available in 3" or 5" diameter schedule 40 pipe.

Simple bollards are available for embedded or removable mounting. A variety of handle options, eyebolts, and padlocks available.

GFRC - Lightweight Concrete

Available in five textures; Acid Etch, Sandblast, Travertine, Fine Grain, and Natural Sand.

FRP - Fiberglass

Available in three textures; Smooth, Rough Stucco, and Orange Peel.

TOURNESOL.COM/FINISHES

GFRC Lightweight Concrete

Our GFRC products are cast in our plant in Juarez, Mexico. GFRC is glass fiber reinforced concrete. It's made by combining a mixture of fine sand, cement, polymer, water, other admixtures, and alkali-resistant glass fibers.

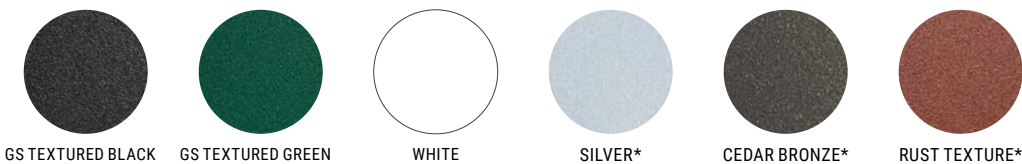

FRP Fiberglass

Our commercial-grade FRP planters are highly durable, last longer than plastic, and will endure in most winter climates. Our labor-intensive process results in a uniform, consistent quality product. Available in three textures; Smooth, Rough Stucco, and Orange Peel.
