- Made from biodegradable and/or recyclable components
- Antimicrobial, so it doesn't support odor-causing bacteria, mold, or mildew

Playground Surfaces

SYNTHETIC TURF
INTERNATIONAL

800.405.7455 www.synthetic-turf.com

STI creates every commercial and residential play area focusing on four key factors: the safety of children, the environmental impacts of the surfacing materials, customer preference and cost containment.

Our playground applications are ADA/ABA compliant and consistent with all CPSC requirements. Our playground applications are ASTM certified and exceed national safety standards. In addition to the safety characteristics of our playground applications, aesthetic qualities are second to none. Unlike with mulch or shredded rubber, our synthetic turf is green, clean and inviting. Our surfaces, like most antimicrobial products, do not support stain and odor causing bacteria, mold or mildew. Your children can enjoy a grassy play area that is durable and safe. Facility owners and parents alike never again have to worry about exposure or contact with harsh chemicals found in pesticides and fertilizers. Instead, they can relax and enjoy their beautiful, green SoftLawn®.

STI offers a colorful line of "Nature's Friends," such as a bright yellow bumblebee and a vibrant, multicolored butterfly, which can be inset in any play area. They add interest and fun, as well as color, beauty and exciting gathering locations for children.

Pre-designed, synthetic hopscotch games are now being inset at larger facilities, enhancing structured game use. STI also offers customized logos for your playground to personalize as you choose.
